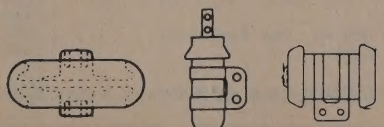
HP POWER & TRANSMITTING CERAMIC CAPACITORS

Exclusive with Aerovox these Power and Transmitting Capacitors are gaining increasing popularity as a replacement for higher priced Transmitting Mica Capacitors. Units may be operated to 105°C without derating and may be safely stored at temperatures of −80°C to +185°C. The dielectric used retains its properties at frequencies above 1000 megacycles to the degree that the inductance at the connections are major limitations in the determination of series resonance frequencies. The effective frequency limit in many cases depends on the method of mounting. Mainly used for By-Pass and Blocking applications these units are finding an increasing usage by manufacturers of transmitters and other allied equipment.



AEROCUP - POWER & TRANSMITTING TYPE AC0-AC8

Smaller version of the HPA - HPC etc. These Transmitting Ceramics find many applications due to standard mounting variations including Wire or Screw Terminals and Female inserts. Available in a wide range of capacities, tolerances, voltages and temperature coefficients. For full engineering details request Catalog from Aerovox Corporation, Distributor Division, or nearest authorized Aerovox Industrial Distributor.

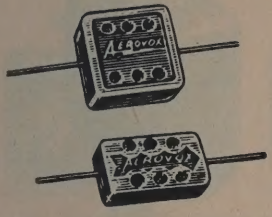
RECEIVING MICA CAPACITORS — (Continued)



Type 1469HV and 1464HV

Designed especially for television, low power transmitters and power amplifier applications, these capacitors feature the highest voltages ever before available in these case sizes. They are furnished in silvered mica molded in red Bakelite. Standard Tolerance is plus and minus 5% and they are tested to meet EIA standards. Units are marked with capacity and working voltage and are tested at double the rated voltage to insure long life.

DIPPED, SILVERED MICA CAPACITORS

TYPES ADM-15, ADM-19, ADM-20 and ADM-30

Aerovox plastic-coated dipped-mica units exceed many of the advantages of molded mica units, and at the same time are smaller than conventional units. Meeting all the applicable MIL-C-5B Test Standards for molded mica capacitors, these unique dipped-mica units offer the following features:

• High operating temperatures —55° to +125°C • Excellent long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and plug-in assemblies • Ideal for printed-wiring assemblies • Unsurpassed performance and stability characteristics • Smaller physical size.

Humidity Resistance: these capacitors shall have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test as outlined in MIL-C-5B. Minimum Insulation Resistance: 25,000 megohms at 25°C; 1000 meghoms at 125°C.

Capacitors will be marked with capacity and tolerance. In addition voltage rating wil be marked on all units other than 500 volts rating.

For full technical information request Bulletin NPJ-104.

CHARACTERISTICS

ADM-15—from 5 to 20 mmf. Characteristic "C".

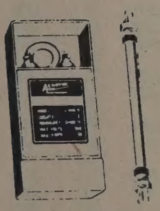
FILTERS

SCREEN ROOM FILTERS



Screen room filters comply with rigid specifications set up by the designers of the most advanced type screen rooms. All have attenuation equal to or exceeding that of the screen room. Easy mounting arrangements plus high attenuation assure you of the finest equipment specially designed for screen room use. These filters are hermetically sealed and terminals at both ends are shielded using knock-outs for ¾" and 1" conduit.

1¼" diameter mounting hole on all cases is countersunk to permit flush mounting of the filter on the screen room.

Crimped Leads

In addition to the straight lead design, DM capacitors are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. The crimp lead design is not a regularly stocked item, but it is available to special order at a small fixed handling charge.

Lead wire gage for crimped lead units is the same as for straight lead capacitors with the exception of DM15 and DM16. Crimped lead gage of DM15 and DM16 is #20.

Maximum Dimensions

The following is a tabulation of maximum dimensions of the various DM case sizes. They have been specified to anticipate variations in coat thickness and minor protrusions on the surface. As a result, average dimensions of a given lot may be appreciably smaller than those listed.

It is to be noted that the leads are not centered in the thickness dimension as can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within 1/16 to 3/32 from one of the capacitor surfaces.

Not all dimensions of every capacitance value are listed below. It has been found that size varies almost linearly with capacitance value. As a result, dimensions of values between those specified below should be determined by interpolation.

SCDM15 capacitors are units which have been given a single protective resin coat rather than the full series of dips to which standard units are subjected. There is a marked difference in size of these thin-coated capacitors, but there is a sacrifice in moisture resistance as a result. SCDM15 units are therefore recommended for applications requiring extreme miniaturization such as military and transistor filter, networks, and delay lines. However, for long term high reliability of operation, the capacitors should receive additional environmental protection such as encapsulation, circuit potting, or hermetic sealing.

HIGH VOLTAGE DUR-MICA

A new line of ELMENCO Silvered Hi-Voltage Dur-Mica capacitors is now available to complement the similar values in the molded configuration. These high voltage capacitors afford the same facility of use in low power applications by providing reliable operation in a small case size. Elmenco Dur-Mica capacitors may be substituted for similarly rated molded units normally supplied in the larger CM45, CM50, CM55, and CM60 case sizes.
The Dur-Mica design provides advantage of higher temperature operation (125° C. max.); radial leads for printed circuit application; higher capacitance in a given case size; and improved reliability. The dipped units, being solidly impregnated with corona resistant material, do not have the voids which make molded types susceptible to corona. As a result, the dipped capacitors can be supplied with voltage rating as high as 5000VDCW.
All Elmenco Dur-Mica capacitors are silvered mica construction. They conform to electrical and environmental specifications set forth in MIL-C-5 specifications.

TYPE HTCM

We supply Elmenco Type HTCM capacitors for these temperature grades requiring operation above the old limit of 85°C. After extensive characteristic evaluation and analysis of hundreds of life tests under varying temperature, voltage and other environmental conditions; it was found that modification of standard design molded mica capacitors was necessary to maintain our standards. We admit that we are very conservative in our design parameters, but we believe that this is the prime reason for universal acceptance of Elmenco products. The modifications which affect the price are as follows:

1. Every mica film is selected for excellence of electrical characteristics at elevated temperatures. This is done 100%, not on a sampling basis.
2. A more expensive molding material is used to preserve strength and electrical characteristics at temperatures in excess of 150°C. This molding material was also selected for the lower molding pressure required. The lower molding stress greatly enhances reliability of the mica films.
3. A solid high temperature impregnant is used in place of the wax for greater stability and retention of resistance to moisture. Wax will have a tendency to melt out at the specified temperatures, causing possible change in capacitance value, loss of moisture resistance after a few cycles, and possible fouling of adjacent circuitry.

With these modifications a vast improvement is obtained in operating reliability at elevated temperature. The expected failure rate is reduced to a small fraction of what might otherwise be expected of standard design capacitors.

ELMENCO CAPACITORS

Type VCM-20

Demand for smaller units in higher voltages designed to meet the requirements for TELEVISION, POWER AMPLIFIERS, LOW POWER TRANSMITTERS, and various INDUSTRIAL USES has increased. EL-MENCO designed and produced units listed below are especially adaptable to compact circuits where space is an important factor. Their acceptance has been overwhelming by the various manufacturers of TELEVISION RECEIVERS.

In many cases, these units will do the work of capacitors molded in CM-45, CM-50, and CM-55 cases without breaking down. NO SPECIAL MOUNTINGS ARE NECESSARY; just wire right into the circuit.

The capacitors are molded in low-loss Phenolic Resin in CM-20, CM-35, CM-42 cases and tested at double the branded voltage. They are tested for dielectric strength, insulation resistance, temperature coefficient capacitance drift, susceptibility to humidity, and length of life, according to RMA Standards. All units are wax-dipped for protection against salt water immersion.

ELMENCO CAPACITORS

TYPE MPD

DIPPED MYLAR*—PAPER (Elmenco type MPD)

The new Elmenco Type MPD (ARCO dp) capacitors are dip-coated tubular Mylar*-paper dielectric capacitors. They represent a double breakthrough in capacitor design by combining missile and computer quality with commercial radio-TV cost. The "dp" series is designed for near universal use from TV by-pass to critical industrial applications requiring stringent electrical and environmental characteristics. New high levels of ruggedness, stability, and reliability have been achieved, yet these new Elmenco capacitors are miniaturized for transistor circuitry.

Elmenco Type MPD capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C. without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

CERAMIC DISC

MINIATURE GENERAL PURPOSE

ARCO Type CCD ceramic disc capacitors have improved ceramic bodies which impart longer life and greater stability to any application. The standard CCD line has a ±10% tolerance and 1000VDCW rating, making possible a single ceramic disc stock for universal use. Whether a broad coupling or by-pass application, or a critical close tolerance use, ARCO CCD units fill the bill with dependability and economy. The 'space-saving' size of ARCO discs is another feature designed to offer greater service convenience with complete safety of operation. In addition to the 1000VDCW line, higher voltage ratings are available in Type CCD units. 3000VDCW (Type 3CCD) and 6000VDCW (Type 6CCD) disc ceramics are supplied in tolerance of ±20%.

TEMPERATURE STABLE

This new ELMENCO ceramic capacitor maintains excellent capacitance stability with wide temperature variation. The graph illustrates typical percentage variation of capacity value with temperature. The operating temperature range has been extended to —55°C. to +125°C. without derating of the 1000VDCW specification. Standard tolerance is ±10%. The combined small size, low cost, and high stability represents another significant advance in the quality line of ELMENCO capacitors. All units are marked "TS" for identification.

TYPE CCTO

Elmenco Type CCTO ceramic disc capacitors are zero temperature coefficient units specifically suited for high stability, high Q application. In addition to extreme temperature stability, Type CCTO capacitors have very high insulation resistance and low aging rate. These special characteristics are added to the high 1000VDCW rating and close tolerance of the entire Elmenco ceramic line to provide a superior capacitor for the special purpose intended. Type CCTO capacitors are identified by "NPO" printed on each unit.

TYPE CCTN

Another member of the Elmenco temperature compensating disc ceramic line is the Type CCTN unit which has a negative temperature coefficient of —750 ppm/°C. (N750). These units are used to counterbalance shifts in other circuit components with change in temperature. The result is a more stable circuit essential to many frequency control applications. Improved ceramic bodies in the temperature compensating line provide greater long term stability in addition to accurate temperature compensation. Type CCTN capacitors are identified by "N750" imprinted on each unit except the smallest size. On the small units the E.I.A. temperature coefficient designation "U2" is imprinted.

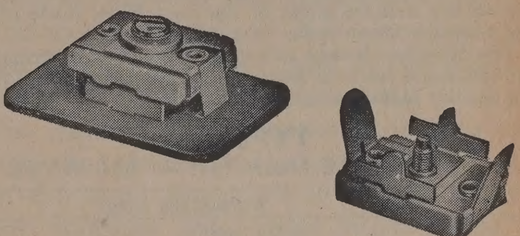
TYPE PC
PRINTED CIRCUIT TRIMMERS



The Elmenco trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until soldered. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trimmers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For net price add $0.03 to the net price of the standard trimmer.

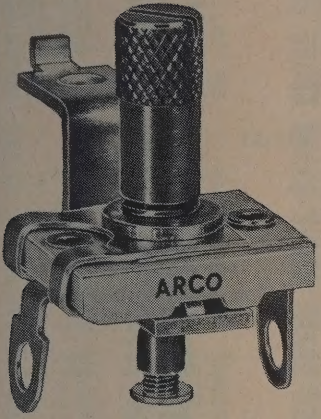
VARIABLE COMPRESSION MICA CAPACITORS



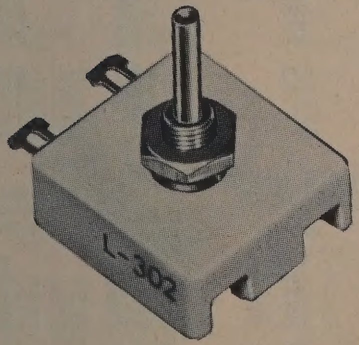
TYPE S46

Net Price:
Add 27¢ to the
Net price of
trimmer alone

A complete Type 46 trimmer assembly with mounting bracket and adjusting shaft for ease of tuning. Can be supplied as pictured from stock or with construction variations to order.

To specify precede trimmer part number with the letter "S".

For example:
Type 460 trimmer will be ordered as S-460.



TYPE - L30

Net Price:
Add .06¢ to the
Net price of
padder alone

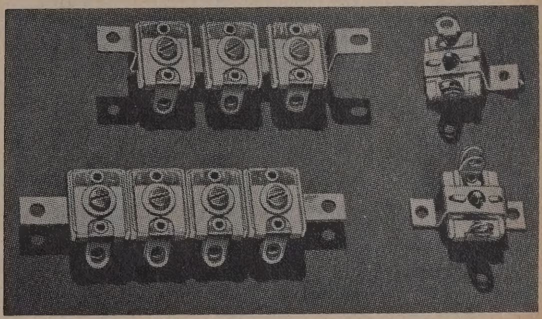
The Type 30 or Type 30M padder can now be obtained with a special adjusting screw which has been lengthened to accommodate a tuning knob. To obtain a padder with the special screw, precede the regular padder part number with the letter "L". For example, a 302 padder with the special screw would be specified as "L-302".

●

NOTE: Knobs may also be obtained if desired at a cost of 30¢ each net.

The two new assemblies shown at left have been developed due to increasing demands for miniaturized tuning devices. However, certain precautions must be taken in design so that these variable mica capacitors are not used in circuits for which they are not adapted. These assemblies are highly stable for components of their design, but they do not match the stability of the air dielectric tuners. Short term drift of the mica trimmers and padders after tuning is negligible. Long term drift at one setting due to changes in atmospheric conditions and physical motion should be well within ± 2%.

It should also be remembered that variable compression type mica capacitors do not have linear variation with adjustment. Rate of change of capacity decreases per turn as the screw is withdrawn. For example, a 306 padder will reduce to half the nominal maximum value within one opening turn. Those with a greater number of plates require further screw disengagement for a similar percentage reduction in capacity value. On the other hand, a 302 padder will reach one-half the nominal maximum in less than one-half turn open. Type 46 trimmers operate in much the same way. Detailed information on specific sizes is available upon request.



Mounting brackets as illustrated above can be supplied for all types of trimmers in flat "Z" (single mounting hole with or without non-rotational stop), and "U" (dual mounting hole) configurations.

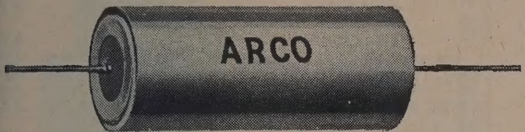
PLASTIC FILM CAPACITORS

TYPES PT, PJ

Type PT capacitors are polystyrene dielectric enclosed in non-ferrous metallic tubes with compression glass end seals. The principle features of this type are high stability, high insulation resistance, low dielectric absorption, and low dissipation factor. Their principle uses include precision filter and tuned circuits, analog computer circuits, pulse networks, servo systems, reference capacitors, and high Q applications.



SPECIFICATIONS:

DISSIPATION FACTOR: .01% max. at 25°C. .02% max. at 85°C.
INSULATION RESISTANCE: 10^5 megohm-microfarads min. for 100vDCW and 200VDCW units; 10^6 megohm-microfarads for 400-VDCW and higher ratings (at 25°C.)
TEMPERATURE RANGE: —55°C. to +85°C.
TEMPERATURE COEFFICIENT: —120 ± 15 ppm/°C. This specification may be tightened if required for specific values.
DIELECTRIC ABSORPTION: .05% max. at 25°C.
STABILITY: ±0.1% maximum capacitance drift long term under maximum operating conditions.
TOLERANCES: standard tolerance ±5%. Also available, ±10% ±3% ±2% ±1% ±½ ±¼%.

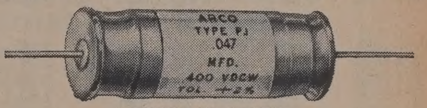
Type PJ capacitors are polystyrene dielectric enclosed in silicone treated fused polystyrene jackets. The same superior quality of the Type PT hermetically sealed units is preserved in Type PJ units while effecting a marked saving in both size and price. Extensive evaluation has confirmed the excellent moisture resistance of this design as well as extreme ruggedness. The Type PJ will meet MIL tests for vibration, shock, moisture resistance and immersion as well as providing the excellent electrical characteristics specified.



SPECIFICATIONS:

SOLID ELECTROLYTE TANTALUM CAPACITORS

The Astron Type TES solid electrolyte tantalum capacitor is a sub-miniature metal cased, hermetically sealed unit, containing only solid materials. The tantalum oxide dielectric endows these capacitors with long shelf life and flat characteristics even at extremes of rated temperatures.

Astron TES capacitors are rugged and reliable units for use in the following applications: transistorized equipment, computers, air craft and missiles, networks and general power supplies, portable equipment, and hearing aids.

ASTRON
TQF CAPACITOR
125°C OPERATION

TEMPERATURE RANGE
−65°C to +125°C

For Commercial and Military Applications

- Amazingly small sizes, compact and light-weight units.
- Highly dependable operation at temperatures up to 125°C. without voltage derating.
- Exceptional capacitance stability over entire temperature range of −65°C. to +125°C.
- High insulation resistance, low power factor, unusually low resonance loss. High test voltage indicates extra margin of safety in operation.
- Built to exceed stringent requirements of Specification MIL-C-25.
- Positive hermetic closure of the metal cases is assured by glass-to-metal solder seal terminals.
- Tubulars supplied in a variety of construction and mounting styles to meet your specific needs: extended foil or inserted tab; capacitor section grounded to case or insulated from case; plastic outer sleeve; with soldered-on tangential or L-type bracket; screw neck mounting style; or stud-base mounting style.

ASTRON CROSS-REFERENCE TABLE TO MIL-C-25

ASTRON TYPE	MIL TYPE	DESCRIPTION	
TQF	CPO4	Uninsulated Body	**INSERTED TAB CONSTRUCTION** Capacitors with inserted tab construction are ideal for minimum size consideration. They are the smallest paper-foil capacitors available, the most compact units for operation over a wide temperature range to 125°C. without derating and can be used in AC as well as DC applications. Where smallest possible capacitor sizes are required, coupled with maximum capacitance stability and high insulation resistance over a wide temperature range, "inserted tab construction" is best suited for the application.
TQFP	CPO5	Insulated Body	
AQF	CPO8	Uninsulated Body	**EXTENDED FOIL CONSTRUCTION** Capacitors with extended foil construction are ideal where long life, excellent capacitance-temperature stability, high insulation resistance and small size, coupled with outstanding electrical characteristics over a wide temperature range, are required. They can be used in AC as well as DC applications. The extended foil non-inductive construction offers the lowest possible resonant losses in both low and high voltage applications.
AQFP	CPO9	Insulated Body

PLASTIC CASED TUBULAR METALLIZED PAPER CAPACITOR

ASTRON METALITE® HY-MET
TYPE MLV

ASTRON Type MVL are axial lead, tubular type metallized paper capacitors contained in plastic tubes with an epoxy end fill to provide maximum moisture resistance. They are free of the usual wax coating and therefore are ideal for potting in plastic resins. The capacitor sections are impregnated in a solid thermosetting plastic which allows operation at temperatures up to 100°C.

It is intended that the Type MVL Capacitors will replace ASTRON types ML and MLL Metallized Paper Tubulars.

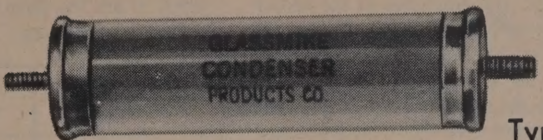
"Glassmike" Plasticon Capacitors



Type LSG

Type ASG

Type ASG are Plasticon A dielectric-silicone fluid impregnated capacitor elements in hermetically sealed glass tubes. Standard range —60°C to +85°C, extended range —60°C to +125°C with proper derating. The smallest and lightest high voltage capacitors made. Type ASG are ideal for DC and low frequency AC applications.

LSG type capacitors have Plasticon L film-silicone fluid impregnant. Designed to compete with mica capacitors, the LSG capacitors are more applicable for Radio Frequency. Special beneficial features include greater safety factor, lower RF loss, more conveniently mounted, utilizes less chassis space, impervious to moisture, and smaller in overall volume.

All 19/32 diameter Glassmikes are supplied with pigtail leads.

CORNING FIXED GLASS CAPACITORS

For coupling, decoupling, filtering, timing, switching, or computer circuits, CORNING capacitors give you ultrastable electrical performance. This stability is inherent in their fused glass and foil capacitive elements, as exemplified in the CORNING CYFR capacitor made for the Minuteman. The properties of the capacitor are entirely those of the closely controlled dielectric. and can't be changed by assembly methods or subsequent treatment. Typical properties: at 1 Kc and 25°C. dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 PPM. Standard values from 0.5 to 10,000 pf are the same as standard decade values in applicable military specifications.

TRIMMER CAPACITORS

For amplifiers, communications equipment, oscillators, and computers, the special glass, special metallizing, and special hardware in CORNING trimmers give you guaranteed Q of 500 at 50 Mc, no derating to 125°C., temperature coefficient under ±100 PPM/°C., high dielectric strength, high insulation resistance —10^6 megohms or higher, and top corrosion resistance. Unique direct traverse design in DT and Mini-Trimmer types moves the tuning core smoothly without rotating, provides top precision and excellent shock and vibration resistance. In addition to types detailed below, Sealed Mini-Trimmers for severe environments are available in panel mount and printed circuit models in the same values as Mini-Trimmers, but at 500 volts and in somewhat larger sizes.

NLW

Type **NLW** is an aluminum foil capacitor, hermetically sealed into an ultra-small tubular aluminum can which is tightly fitted with an outer transparent plastic sleeve to insure freedom from "shorts" with adjacent components commonly found in compact assemblies. All terminal connections are securely *welded*. Despite their extremely small size, "Electomites" exhibit excellent electrical characteristics as well as rugged physical construction. Ideal for by-pass, filter and coupling applications in low-voltage, compact, miniaturized equipment.

TEMPERATURE RANGE: —40°C. to +85°C.

TOLERANCE: —10%, +150%

NOMINAL LEAD LENGTH: 1½" — #22 AWG

CLASS 201.26 "BLUE BEAVER" Tubular Electrolytics

BR

Type BR is the compact unit in *aluminum can with cardboard outer sleeve*. Fits neatly into cramped quarters, self-supported by rigid tinned copper leads. Larger sizes may be further supported by a metal strap. NEGATIVE TERMINAL IS GROUNDED TO CAN.

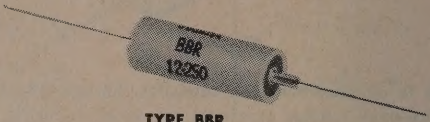
TYPE BR

BBR

Type BBR "BLUE BEAVERS," miniature versions of the BR, are especially popular for cramped space installations in television receivers, hearing aids, miniature radios and other small assemblies. They are hermetically sealed *in tubular aluminum containers with cardboard sleeve* and ideally suited to meet requirements in low voltage circuits. NEGATIVE TERMINAL IS GROUNDED TO CAN.

The anodes AND cathodes of all BBR and BR units up to and including 150 volt ratings are ETCHED. This feature recommends these types for use with JUNCTION RECTIFIERS.

TEMPERATURE RANGE: to +85°C except 500 V. D.C., to +65°C.



TYPE BBR

Lead Lengths: BBR — 2⅜" ± ⅛" — #20 AWG

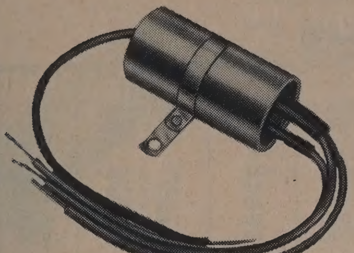
Multi-Section Tubular Electrolytics



BBRT

A series of compact, tubular METAL-CASED CARDBOARD SLEEVED electrolytics—specially sealed against heat and humidity.

Featuring—

- Direct-to-terminal internal lead construction reduces possibility of shorts. (Pure aluminum wires crimped securely together with outer leads within aluminum stud terminals.)
- New high-insulation vinylite covered leads — generous 7 inches long.
- Sections sealed in aluminum tube for protection against moisture getting in, or electrolyte drying out.
- Wax impregnated cardboard outer insulation sleeve.
- Rubber diaphragm-type vent insures ideal vent action under all conditions.
- **IDEAL FOR OPERATION AT TEMPERATURES UP TO 85° C.**

C D E is first with the square electrolytic. This unique capacitor will be a boon for printed circuit applications because of its form factor and flush mounting characteristics. It is ideal for low-voltage transistorized circuits, as well. A high-impact, preformed phenolic case, in conjunction with a section imbedded in a special cast resin, will insure a moisture-tight, heat-resistant enclosure. The tinned copper leads are welded to the anode and cathode tabs, providing minimum contact resistance. The pre-formed phenolic case will guarantee exact lead centers, as well as a highly shock resistant case.

QUIETONE® Interference Suppression FILTERS

NFF and NFT types are coaxial feed-thru capacitors. Since the conductor is completely surrounded by the capacitor, these provide much more effective bypassing at frequencies encountered in Citizens Band, Amateur Radio, and other high frequency communications services. MC-8D98 is a heavy-duty bypass capacitor, specially designed for use on vehicular accessories.

NFF-055B is designed to be used in place of the conventional condensers on the automobile generator and spark coil. NFF-315D is intended for use at the generator and battery terminals of the voltage regulator.

The A-C line on a fixed-station transmitter can be effectively filtered against TVI by using two of the Type NFF-315D as terminals on the chassis and connecting the line-cord to them with conventional insulated plate caps. (This also provides easy removal of the line-cord to prevent unauthorized use of the equipment).

FOR USE ON INDUSTRIAL AND HEAVY-DUTY ELECTRICAL EQUIPMENT

Cornell-Dubilier UNIVERSAL Quietone filters offer a practical solution for the suppression of interference from many types of household, industrial and heavy duty electrical equipment. See "Radio, TV and Appliance Quietones." A partial list of such sources is shown in the QUIETONE APPLICATION SELECTOR. Because high frequency disturbances are usually carried through the power lines, most effective interference suppression is obtained when the Quietone filter is installed on the equipment as an integral part thereof.

C-D Quietones are designed to give optimum suppression on the equipment for which they are intended and can be relied upon to render excellent service.

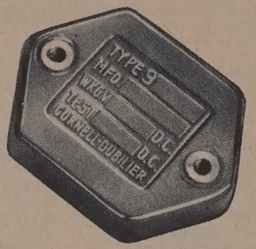
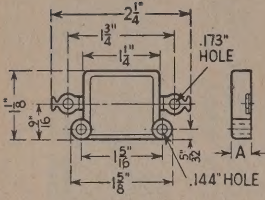
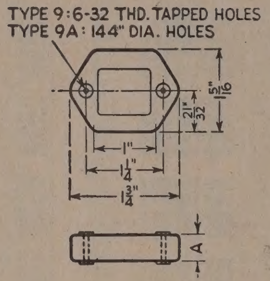
TYPE 4



TYPE 9





C-D types 4 and 9 are designed to meet applications in power amplifiers and low-power transmitters. Principally employed for grid and plate blocking and for r.f. by-pass. **Units are molded in a low-loss bakelite and have a special salt water immersion seal against humidity.**

In the type 9 the two terminals are tapped to receive mounting screws.

STANDARD TOLERANCE: ±10%.

CDE

CORNELL DUBILIER
PM

PM

CDE type PM is a MYLAR* dielectric, high temperature, moisture resistant molded tubular capacitor. The thermoset molded case is tough and non-inflammable. The Mylar dielectric assures dependable operation under high humidity conditions, and it exhibits very high insulation resistance. Low RF impedance of these capacitors makes them ideal for all general bypass and coupling applications. High stability under changes in temperature makes these capacitors excellent replacements in tuned circuits.

TOLERANCE: ±10%.

TEMPERATURE RANGE: −55°C to +85°C with no derating.

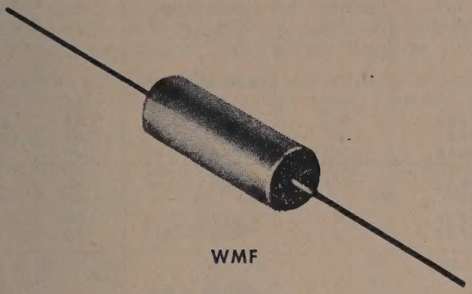
Film-Encased Tubular Mylars*



WMF

Type WMF is an ultra-compact Mylar dielectric tubular capacitor encased in a thin, tough Mylar film wrapping and end-sealed with a high density thermosetting plastic. A most desirable unit where a metal-cased unit is not indicated. The WMF is extremely small in size, has high resistance to humidity and excellent capacitance stability with temperature and life.

TEMPERATURE RANGE: —55°C. to +125°C.
Full rated voltage at 85°C.
Derate voltage 10% at 100°C.
Derate voltage 50% at 125°C.

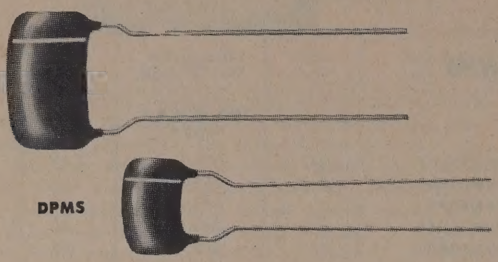
CLASS 204.37 Side-Lead Dipped Paper-Mylars*



Type **DPMS** is unique in that it is constructed with TWO dielectrics — Mylar* Polyester Film and a film of the very highest grade paper. The combination of the two thus provides the best features of both —

- ★ **HIGH TEMPERATURE OPERATION**
- ★ **HIGH INSULATION RESISTANCE**
- ★ **HIGH RELIABILITY**
- ★ **COMPACT — SPACE SAVING**
- ★ **IDEAL For Printed and Transistorized Circuitry**

"FIXFIL" impregnant, a C-D exclusive, assures stability of temperature characteristics. This solid thermosetting compound will not crack, soften or flow, even at maximum operating temperatures.

The **DPMS** has a "dipped" rock-hard casing which holds wire leads rigidly at fixed spacings. This tough, durable material has high humidity resistance, high dielectric strength against grounding and is unaffected by accidental contact with soldering iron. The crimped side-leads are space saving and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

207.04 Triclad Metallized Papers

CDE

MPY4W1
1.0MFD
400V
MPY

CORNELL-DUBILIER TYPE MPY CAPACITORS are metallized paper, resin-impregnated units for operation from −55C to +125C at full rated voltage.

These capacitors are encased in CDE-developed Triclad tube — a laminated tube that is completely wax-free and extremely resistant to moisture. The Triclad tube consists of a resin-impregnated Kraftboard exterior bonded to a foil-film shield. In addition to being moisture-proof, it is also heat resistant. The Triclad tube is unaffected by accidental contact with a hot soldering iron.

Type MPY capacitors have the self-heating characteristics of metalized dielectric capacitors when subjected to momentary over-voltages. The resin-impregnant will remain solid throughout the entire operating temperature range and will not soften, melt or flow.

STD. TOLERANCE: ±20%.

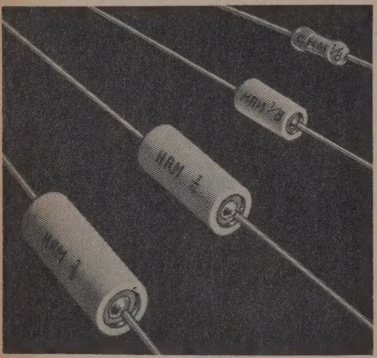
HIGH RELIABILITY RESISTORS



Four Electra resistor styles have been designed to meet the highest levels of MIL-R-55182.

The HRM series is produced in the RNR57, RNR63, and RNR70 sizes of the established reliability specification.

The CHM ⅛ offers ⅛-¼ watt high reliability performance at 125/70°C, yet dimensionally it is smaller than most RNR55 or RN55 MIL styles.

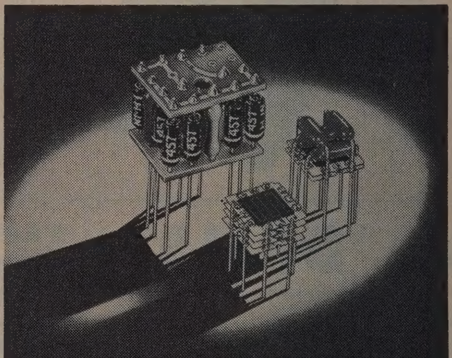
INTEGRATED CIRCUITS

...with micromodular components



Here are examples of the versatility offered in the Electra Micro-module program. Micro-module circuits by Electra utilize thin film wafer stacks, discrete elements, or combinations of both. Electra will package complete circuits to your specifications, or supply the individual components.

Both resistive and capacitive networks, or RC combinations are offered on planar ceramic substrates.

F-C-I POLYSTYRENE CAPACITORS

F-C-I Polystyrene capacitors are characterized by a unique combination of low power factor, high insulation resistance and low dielectric absorption ("soakage") which cannot be duplicated by any other type capacitor except Teflon units. Furthermore, the capacitance stability is excellent, and the temperature coefficient of capacitance is very small. F-C-I Polystyrene capacitors are furnished as standard units in hermetically sealed metal shells; in bathtub cases with low loss steatite terminals; and in style CP70 metal cans with low loss steatite terminals. Special units, including multi-section blocks are also available to order.

TOLERANCES TO .25% AVAILABLE.

F-C-I HIGH VOLTAGE CAPACITORS

F-C-I Type D-6 capacitors employ a newly developed plastic film, plus Kraft paper dielectric which, with suitable processing, produces capacitors which are better, smaller and cheaper than could ever be produced before. F-C-I Type D-6 capacitors are suitable for practically every type of high voltage D-C application. Type D-6 is designed to operate over a temperature range of —55°C to +85°C, without derating. Type D-6H is designed to operate over a temperature range of —55°C to +125°C, with derating, and is available in the same case sizes. With these capacitors available, it is no longer necessary to stock groups of units each outstanding in only one property. F-C-I Type D-6 capacitors are furnished in steatite tubes with hermetically sealed metal end caps and either threaded studs or wire leads. Sizes not listed here can be furnished upon request. Ask for our quotation.

ADJUSTABLE, SEALED POLYSTYRENE CAPACITORS

F-C-I adjustable capacitors are designed for use in ultra-precise circuits where a large capacitance of an extremely close tolerance is required, and yet cannot be predicted in advance due to second order effects in the circuitry. In order to attain the exact value of capacitance needed in such circuits, F-C-I has designed a series of polystyrene capacitors whose capacitance value may be adjusted over a range of plus or minus 1½% of nominal value. (Plus or minus 2% for values of 0.1 Mf or lower can be attained.) The windings are completely non-inductive, thus minimizing power factor and soakage.

TYPE KM-7
HIGH VOLTAGE BAKELITE CASED CAPACITORS

F-C-I Type KM-7 capacitors are designed for high voltage applications where space is at a premium. Capacitors are housed in cylindrical electrical grade Bakelite cases and are filled with a purified mineral oil. The dielectric employed is a combination of polyester film and the finest grade capacitor tissue. Easy mounting is accomplished with the ¼-20 x ⅞ bolts. Corona is held to minimum because of the elimination of all metal. These capacitors are ideal for use in high voltage power supplies, test equipment, X-Ray equipment, energy storage, etc. Suitable for operation up to 85° C.

All capacitors are constructed with extended foil windings, and all internal wiring is kept to a minimum. This eliminates most of the series inductance and produces a very high ringing frequency, an extremely desirable condition for energy storage and pulsing capacitors.

HIGH VOLTAGE
TYPE KM-2 CAPACITORS—85 C OPERATION WITH SOLDER-SEAL CERAMIC BUSHINGS

F-C-I type KM-2 capacitors have been designed specifically to meet the need for smaller, more reliable capacitors that will withstand the severe operating conditions encountered in military and industrial electronic equipment. The dielectric employed is a combination of synthetic Polyester film and the finest grade capacitor tissue. Capacitor cases are of CP70 rectangular construction. Units will meet the requirements of proposed specification MIL-C-19978. Terminals are of the solder seal ceramic type with screw bolt terminations for easy connections and true hermetic sealing. Capacity tolerance is plus or minus 10% with an insulation resistance of 20,000 megohm microfarads. Specify type KMH-2 for operating temperatures up to 125°C. Case sizes for the KMH-2 and engineering data for both series are available upon request. CP07 mounting brackets are available for all sizes.

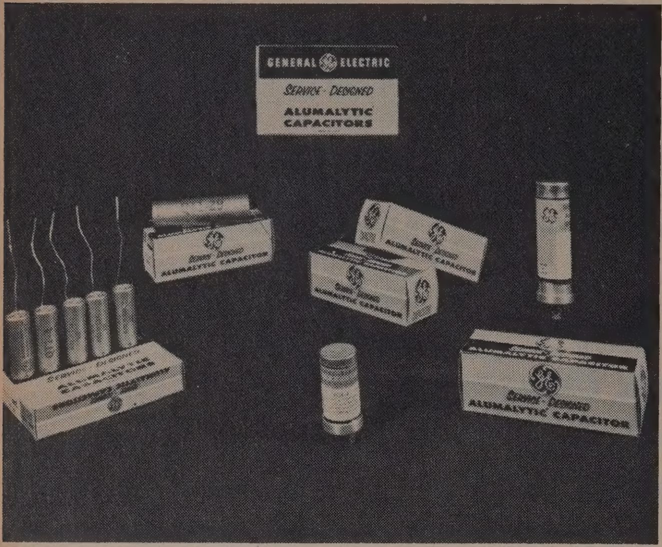
ELECTRONICS service-designed capacitors



General Electric has taken the confusion out of the capacitor business! With General Electric's new line of Service-Designed Alumalytic® Capacitors, you will now be able to make **all** your electrolytic capacitor replacements with one-fourth as many types. In fact, you'll be able to handle over 70% of your electrolytic capacitor replacement needs with just 20 G-E types!

Fewer G-E types are needed to meet your requirements because every G-E capacitor meets not just one, but a range of capacitance and voltage requirements. This extended-range approach reduces the total number of types in much the same way you are already doing it in the rectifier field when, for instance, you use a 500 ma unit to replace units rated at 500 ma or less.

As a result of the greatly reduced number of types necessary to meet your capacitor replacement needs, you can:

SIMPLIFY YOUR PURCHASING PROBLEMS. You can now replace any aluminum electrolytic capacitor used by any radio and TV manufacturer in the past ten years with one-fourth as many types. Ordering is faster and easier —because A FEW WILL DO!

MEET MOST NEEDS WITH A SMALL STOCK. If you wish, General Electric can suggest a stock list of 20 or more types which will meet 70% or more of your replacement needs. If you presently stock a large number of aluminum electrolytic capacitors, you will be able to reduce your inventory and still meet most of your needs. If you do not presently stock capacitors, you will now be able to carry a small assortment and save on single-unit ordering and pickup costs — because A FEW WILL DO!

ELECTROLYTIC TUBULARS (Type QT)

Application: General Electric Type QT electrolytic capacitors are designed for all television and other electronic applications requiring high reliability and long life. Each capacitor listed can be used as a replacement in applications requiring a capacitance value at or between the two capacitance values shown and provided the application voltage does not exceed the capacitor's rated voltage.

The larger bold type capacitance value is the absolute value or the value normally shown on ordinary capacitors.

Example: The rating of QT1-10 (15-**20** mfd up to 475 VDC) means that this is a 20 mfd capacitor which can replace capacitors rated 15, 16, 17, 18, 19 or 20 mfd at any voltage up to and including 475 VDC, and still be well within approved limitations.

ELECTRONICS service-designed capacitors

TWIST-PRONG ELECTROLYTICS (Type XC)

Applications: General Electric Type XC electrolytic capacitors are designed for all television and other electronic applications requiring high reliability and long life.

Each capacitor listed can be used as a replacement in applications requiring a capacitance value at or between the two capacitance values shown and provided the application voltage does not exceed the capacitor's rated voltage.

The larger bold type capacitance value is the absolute value or the value normally shown on ordinary capacitors.

Example: The rating of XC1-2 (15-**20** mfd up to 500 VDC) means that this is a 20 mfd capacitor which can replace capacitors rated 15, 16, 17, 18, 19 or 20 mfd at any voltage up to and including 500 VDC, and still be well within approved limitations.

Description: The 100% use of high purity aluminum foil for anodes insures longer shelf and operation life with superior capacitance, resistance, and leakage current characteristics. These capacitors are hermetically sealed in aluminum cans and packaged with phenolic mounting wafers.

Temperature Range: —20°C to 85°C.

PAPER-MYLAR SIDE-LEAD TUBULARS (Type MPC)

G-E Type MPC is especially designed for use in printed circuits as well as conventional wiring in television and radio. It has two dielectrics—Mylar* polyester film and highest grade paper—which provide high insulation resistance and high reliability while saving space. Type MPC capacitors have maximum stability of temperature characteristics because they are dipped in a solid thermosetting compound which will not crack, soften or flow, even at maximum temperatures.

Side leads are held rigidly at fixed spacings by a dipped, rock-hard casing with high humidity resistance and high dielectric strength against grounding. This tough, durable material is unaffected by contact with soldering iron. Crimped side leads save space and permit uniform mounting of units parallel to the plane of the chassis or printed wiring board.

Temperature Range: 55°C to +125°C. (Derate working voltage by 25% for + 125° operation)

TYPE CQM *(Bulletin EL-8A)*

Exacting performance of digital computers and related equipment demands components of the highest grade. Improved internal construction provides for low impedance at high frequencies, assures superior operation through the operating range at −20°C to +85°C.

Cases are of heavy guage aluminum. A leak proof seal is obtained by rolling the top of the case into a pliable synthetic rubber gasket. Terminals are available in two styles: tapped terminal inserts, for bus bar connections and solder lug terminals for permanent connections. The capacitors are furnished with bare case, one piece vinyl sleeve, or clear rigid plastic sleeve.

TYPE TAK, TAK-H (MIL TYPES CL64 & CL65) MINIATURE SINTERED ANODE TANTALUMS *(Bulletin ET-8)*

Afford maximum space economy. Conventional cylindrical cases allow for various methods of mounting. Sealing method and materials used in manufacturing this capacitor assure protection against seepage and defect due to vibration. Manufactured to meet MIL-C-3965 specification, style CL-64 and CL-65 (insulated sleeve). For full details write for Engr. Bulletin ET-8.

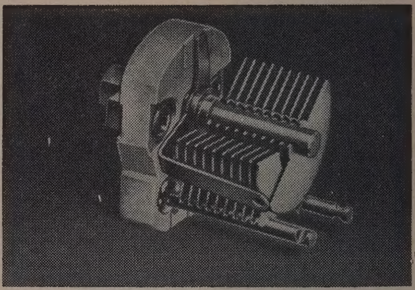
HAMMARLUND

A GIANNINI SCIENTIFIC COMPANY G.S.

STANDARD VARIABLE CAPACITORS

"APC" CAPACITORS



FEATURES—The "APC" trimmer capacitor originated by Hammarlund over twenty years ago is still widely recognized as the standard capacitor of its type. Its use is indicated in all classes of equipment where a compact, high quality air dielectric trimmer is required. It was designed to resist effects of temperature, moisture and vibration. Silicone treated steatite insulation is used to insure high leakage resistance.

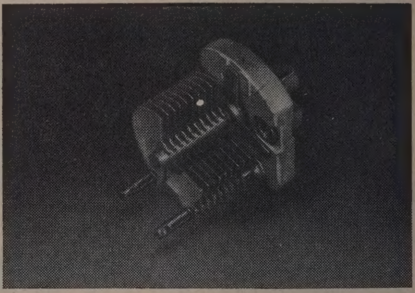
CONSTRUCTION—Brass rotor and stator plates are soldered to brass supports. Nickel-plated phosphor bronze wiper assures positive rotor contact. All metal parts are nickel-plated. Terminals are hot-tin dipped. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding the rotor.

SPECIFICATIONS—Straight line capacity characteristic. Available either with hexagonal collar on slotted shaft to permit rotor adjustments to be made with wrench or screwdriver or with ½" extended shaft for knob control or shaft coupling. (Type "B") "APC-C" Lock Type now also available through distributors. Air Gap is 0.015" nominal. Tested at 600 V. R.M.S., 60 cycles.

Code	Capacity		Plates	Net Price
	Max.	Min.		
APC-15	17.	2.8	5	$1.25
APC-25	25.	3.0	7	1.35
APC-50	50.	3.9	14	1.55
APC-75	75.	4.6	20	1.70
APC-100	100.	5.5	27	1.85
APC-140	140.	6.7	37	2.15

"B" and "C" types slightly higher

"MAPC" CAPACITORS



FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC". Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

SPECIFICATIONS—Straight line capacity. Available either with screwdriver or socket wrench adjustment or with 7/16" extended shaft for knob control or shaft coupling. (Type "B") "MAPC-C" Lock Type now also available through distributors. Air Gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

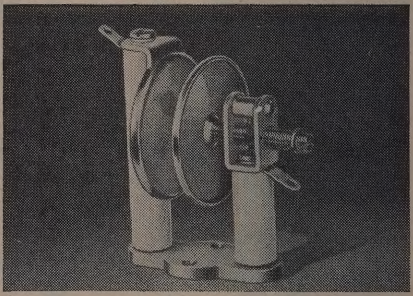
"NZ-10" CAPACITORS

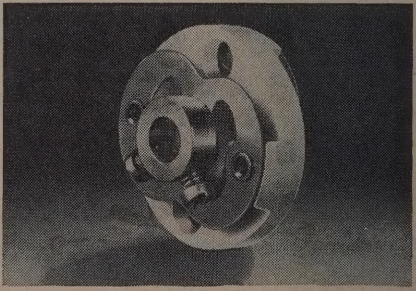


FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

Net Price $4.77

"FC" and "FNC" COUPLINGS



FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flashover voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

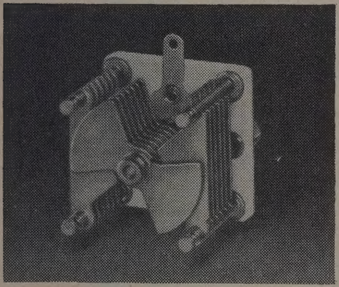
"RMC" CAPACITORS

FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver plated phosphor bronze spring wiping against a wide disc on the rotor. The plate shape and other constructional features are the same as on the "MC". Tapped holes in front panel and in mounting feet, as well as additional brackets for inverted mounting permit a wide variety of assembly methods. "M" type plates and ball-bearing construction can also be made available as specials.



"BFC" CAPACITORS

FEATURES — The "BFC" "butterfly" type capacitor has very low minimum capacity, low in inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor connection. For dual split-stator capacitor use, it has a low-loss positive rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION — Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver plated phosphor bronze. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030″ nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

"VU" CAPACITORS

FEATURES — The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance. The symmetrical design is ideal for tuned circuits operating up to 500 megacycles.

CONSTRUCTION—Rotors and stators are of brass with plates soldered in precisely located grooves and then silver plated to increase the "Q" of the capacitor. The insulation is silicone treated steatite. All lengthwise frame members are of brass to minimize temperature effects. Base mounting brackets are provided.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .0168″ nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

STANDARD VARIABLE CAPACITORS

"MC", "MCA" and "MCD" CAPACITORS

FEATURES—The "MC" is a versatile single section tuning capacitor designed to give the equipment engineer a choice of mountings, connections and capacity characteristics. The threaded brass front bearing and tapped aluminum end brackets permit panel or base mounting. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. Hammarlund "MC" capacitors, except for "MCA" types, have silver plated phosphor bronze wiping contact, silicone-treated steatite insulation, soldered nickel-plated brass rotors and stators, rotor shaft supported on bearings at both front and rear of capacitor.

The "MCD" is a split-stator panel-mounted capacitor with all the "MC" features. Stators have terminals on both sides. Stators on single-spaced capacitors are separated by a shield. Wide-spaced units have no shield. Multi-section capacitors can be designed for special applications.

A rotor stop is available on "MC" capacitors on special order.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

"HF" and "HFD" CAPACITORS

SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting. Special spacing, capacity values, finishes and other modifications are available to manufacturers on special order.

DOUBLE SECTION CAPACITOR — The "HFD" dual capacitors, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Soldered brass plates are nickel-plated. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Front and rear bearings with wide individual silver plated phosphor bronze wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting. Electrostatic shield between sections. Terminals are provided on both sides of each stator to permit mounting tube and inductor on opposite sides. Multi-section capacitors can also be made available to customer specifications.

SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.

"HFA", "HFA DIFFERENTIAL", "HFA DUAL", and "HFBD" CAPACITORS

SINGLE SECTION CAPCITORS—The "HFA" is a single section tuning capacitor similar to the "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher breakdown ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal mounted with the bearing provides an efficient rotor connection.

DIFFERENTIAL TYPE CAPACITORS — The "HFA" type units are now available as standard items in the differential type construction. The unit is mounted with an ungrounded rotor making it suitable for a wide field of application. In addition to the features of the "HFA" the design also incorporates the use of a spring bronze silver plated wiping contact on the rotor.

DOUBLE SECTION CAPACITORS—The "HFAD" and the "HFBD" are dual balanced rotor capacitors employing front and rear panels plus a single ball rear thrust. Both units are applicable to transmitter design. The construction features are similar to the "HFA" and the "HFA Differential" type capacitors. Additional special feature employed on the "HFBD" type incorporates the use of an insulated shaft extension on the rotor to safeguard against shock hazards with the application of high voltages.

SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.

① Current ratings can usually be increased by 50% with proper forced air cooling, and up to 400% with water cooling.

② Nominal dimensions are for the largest unit of each type.

③ Voltage and current limitations are dependent upon capacity and frequency. Specific voltage and current information at all frequencies is available upon request.

NOTE: A series of adjustable capacitors is available to cover the range of 8 to 1000 pf at 10 kv.

Jennings application engineers are available to discuss special application problems. If necessary we will run special tests in the Jennings Radio Frequency Testing Laboratory, where equipment is available with frequencies up to 600 mc, and power ratings up to 100 kw.

FP-WP AND PFP-PWP METAL CAN ELECTROLYTIC CAPACITORS

FP-WP capacitors are manufactured to the most rigid quality standards. They are designed for extremely long-life service at 85° C. All are designed with "etched cathodes" for hum-free operation and feature exclusive vent and seal construction. FP-WP types have standard twist-prongs, PFP-PWP fit exactly into EIA standard printed circuit boards. FPS is special mounting used in Delco auto radios. "A" suffix indicates new reduced can size. All PFP-PWP types may be used in standard twist-prong mounting while FP-WP types may be quickly adapted to printed circuit mounting by using the FPA Adapter Kit (Net Each, **27c**). All cases are at negative potential. For circuits requiring "above ground" isolation, specify BP Bakelite# plates when ordering. See complete capacitor hardware listing on another page. ***SIZES are shown at end of listing.**

HIGH VOLTAGE CAPACITORS
TYPE LK

MYLAR★ PAPER FILTER CAPACITORS

TYPE LK Capacitors are specifically designed for filter, bypass and coupling applications in the low audio frequency range. The CP70 style container and internal construction permit operation in any position. Glazed steatite bushings are used, and in the voltage ranges of 2000 and greater, steatite is the electrical insulation in the terminal assembly. The threaded stud terminal is supplied with nut, lockwasher and/or solder lug. The whole assembly is hermetically sealed.

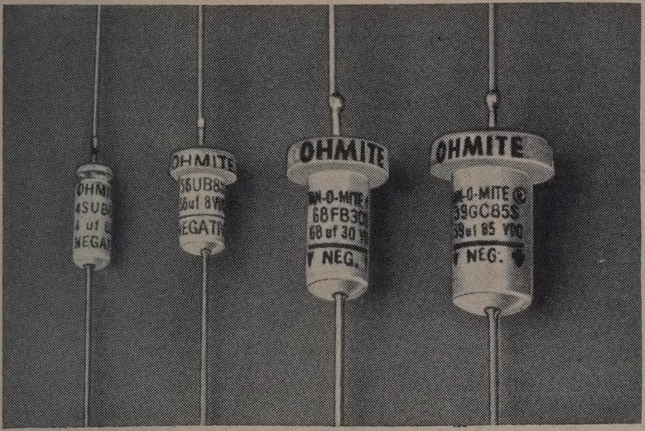
TANTALUM SLUG CAPACITORS — TAN-O-MITE® SERIES TS



1½″ Leads Com'l Size SU, MIL Size T1 — 1½″ Leads Com'l Size U, MIL Size T1 — 2¼″ Leads Com'l Size F, MIL Size T2 — 2¼″ Leads Com'l Size G, MIL Size T3

The "slug" type of tantalum capacitor utilizes a porous anode of sintered tantalum. Intended for polar applications, these capacitors offer the best characteristics of all the types described in this catalog. They exceed the vibration test of MIL-C-3965C, Grade 3.

Available from stock in two physical types—the "hat-shaped" type, 4 sizes (Y, U, F, G) and the "straight-cylindrical" type, 3 sizes (SU, SF, SG) which have the same range of capacitance and voltage as the equivalent hat-shape sizes. Hat-shape types are offered in two operating temperature ranges, −55°C to +85°C and −55°C to +125°C; the straight-cylindrical type is offered only in the 85°C range. Tolerances: See footnotes under price and stock tables. Units insulated with plastic sleeve are available at slight extra cost.

†Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SUB6_." (Where a space is not provided, the capacitor is **NOT** available as a straight-cylindrical type.) If a hat-shape capacitor is desired, write this number without the space as in "30UB6_." Add K, S or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete MIL type designation as follows: For hat-shape, uninsulated type, insert "44" after "CL__"; for insulated type insert "45" instead. For straight-cylindrical shape, uninsulated, insert "64" after "CL__"; for insulated type insert "65" instead. Note: CL64, CL65 not available in 125°C ratings ("C" char.). Insert S, T, M, or K before "P" to indicate tolerance.

‡High capacitance units.

§Not available as CL64, CL65 straight-cylindrical capacitors.

▶For hat shape; an "S" precedes the letter for straight-cyl. as in SY, SU.

Tolerances: T = −15+50%; S = −15+20%; M = ±20%; K = ±10%.

†Complete commercial stock no. as follows: If straight-cylindrical capacitor is desired, insert an "S" in the middle of the number where the underlined space is provided as in "30SUB6_." (Where a space is not provided, the capacitor is **NOT** available as a straight-cylindrical type.) If a hat-shape capacitor is desired, write this number without the space as in "30UB6_." Add K, S or M at end of number to indicate tolerance. Add "A" after tolerance letter if insulating sleeve is desired.

*Complete MIL type designation as follows: For hat-shape, uninsulated type, insert "44" after "CL__"; for insulated type insert "45" instead. For straight-cylindrical shape, uninsulated, insert "64" after "CL__"; for insulated type insert "65" instead. Note: CL64, CL65 not available in 125°C ratings ("C" char.). Insert S, T, M, or K before "P" to indicate tolerance.

‡High capacitance units.

§Not available as CL64, CL65 straight-cylindrical capacitors.

▸For hat shape; an "S" precedes the letter for straight-cyl. as in SY, SU.

Tolerances: T = —15+50%; S = —15+20%; M = ±20%; K = ±10%.

Smallest subminiature electrolytic capacitors available. The anode is specially processed tantalum wire sealed into a silver case. Axial leads are 2" long. Units are insulated with Mylar plastic sleeve. These polar type units are used in DC circuits where capacitance can exceed nominal circuit values (standard tolerance, —0 + 100%). Wide use in hearing aids and other subminiature apparatus. Operating temperature range: —55°C to +85°C. Nine of thirteen available case sizes stocked.

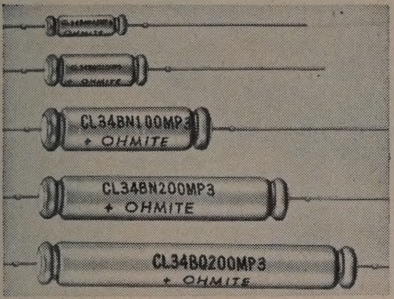
TAN-O-MITE® SERIES TF TANTALUM FOIL CAPACITORS



Plain and etched tantalum foil units stocked in polar and non-polar types. The polar unit is intended for applications in which reversals of potential do not occur but will withstand reversals up to 3.75 VDC except where the voltage rating is less. Foil types offer closer tolerance, also leakage and power factor characteristics superior to wire types. The etched foil units afford higher maximum capacitances for a given case size and have somewhat lower leakage current than the plain foil units. Operating temperature range: −55°C to +85°C. Tolerances: Plain foil, ±20% (MIL code "M"). Etched foil, less than 50 volts, −15 +75% (MIL code U); 50-99 volts, −15 +50% (T); 100-150 volts, −15 +30% (S). 1½" axial leads. Designed to meet MIL-C-3965C, Styles CL24, CL25, CL26, CL27, CL34, CL35, CL36, CL37. 5 MIL case sizes. All units meet MIL vibration rating Grade 3. Units can be furnished with plastic sleeve.

Numbers in ▨ are non-polar units. Non-polar units may be used as polar units.

‡For insulating sleeve add "S" to commercial stock number; on MIL designations, change "CL24" to "CL25," "CL26" to "CL27", "CL34" to "CL35" or "CL36" to "CL37".

*Regardless of polarity indicated, these low voltage units can be used as either polar or non-polar units.

†MIL-C-3965C requires only 3 volt rating—Ohmite units are rated 3.75 v.

Dual Section Electrolytics — Type "IL"

Hermetically sealed in aluminum tubes with completely flexible leads. U/L Approved, plastic coated leads are rivetted directly to the condenser end disc, eliminating the use of rigid terminal risers, allowing capacitor to fit into smaller space and eliminating lead breakage. IL capacitors have wrap around mounting strap and are common negative, guaranteed for one year.

Type DCM COMPUTER GRADE FILTER AND ENERGY STORAGE ELECTROLYTIC

The SANGAMO Type DCM is a high quality, long life, electrolytic capacitor, specially designed for use as an energy storage or filter capacitor. The Type DCM is enclosed in an aluminum can and is normally furnished with a clear plastic insulating sleeve. Aluminum terminals, which are permanently molded into the top, include #10-32 machine screws. A pressure-sensitive vent is provided as a safety mechanism in each top. In the listings, the Sangamo specification number has been adopted as the catalog number. The numbers "539" in the catalog number indicate the type as DCM. The new catalog numbers reflect the change in terminal spacings as noted in the table below. A footed, wrap-around mounting bracket is available at extra cost. For more complete information write for Engineering Bulletin 2231.

ELECTRONIC COMPONENTS

Type 505

INSTRUMENT GRADE ELECTROLYTIC CAPACITOR

The SANGAMO Type 505 electrolytic capacitor is specifically designed for the rigorous requirements of instrument manufacturers. It has "twist-tab" terminal construction and is encased in a metal, tubular can. A plastic insulating sleeve can be supplied on request. Improved overall design has resulted in increased shelf and operating life, lower leakage current, and better temperature characteristics.

When ordering the SANGAMO Type 505 refer to the catalog number listed or give the voltage and capacitive rating required. For more complete information, write for Sangamo Bulletin 2235.

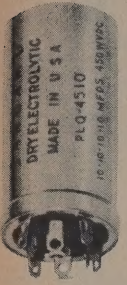
Type PL and Type PLP Electrolytics



TYPE PL
For Twist Tab
Mounting

The Sangamo Types PL and PLP, "Twist Tab", electrolytic capacitors are specially designed for television and electronic applications requiring long life and dependable performance at 85°C. They are sealed in round aluminum cans with the element tabs securely clamped and staked to the terminal lugs, thus assuring permanent, low resistive connections. In all cases the aluminum can and mounting ring are grounded. All units are manufactured to satisfy conditions of high ripple currents and high surge voltages.

The Type PLP has a combination base allowing interchangeable use for mounting in printed circuit boards and also for conventional twist tab mounting. For complete listings write for Bulletin 2252.

TYPE MTD

TYPE MMT

SANGAMO Types MT, MTD and MMT are specially designed for radio and television applications and other electronic equipment operating at temperatures up to 85°C. They are encased in drawn aluminum containers with MYLAR® insulating sleeves on which polarity is clearly marked. The Type MMT, which is a miniature version of the MT, is ideally suited to meet the precise operating requirements of low voltage circuits. Because of their small physical size the MMT and MT, up to ¾'' diameter, are self-supported by means of reinforced bare tinned copper wire leads. The MT and MTD units are provided with mounting straps in 7/8'' and 1'' diameters.

SANGAMO ELECTRONIC COMPONENTS

Type MJ MOTOR STARTING ELECTROLYTIC

DRY ELECTROLYTIC
MOTOR STARTING CAPACITOR
378-440 MFD 110 VAC
60 CYCLES
MIL-1131

The SANGAMO Type MJ motor starting capacitor is designed for maximum capacitance per unit volume, heavy duty applications and long life--all of which provide dependable performance under unusual environmental conditions.

These capacitors are encased in black plastic cases. A plastic end cap is available at extra cost. All Type MJR capacitors are equipped with combination lug and screw terminals adaptable for solder, quick disconnect or screw connections, making them ideal for the replacement market. Units are also available in aluminum case as the Type EM. For more complete engineering information write for Bulletin No. 2228.

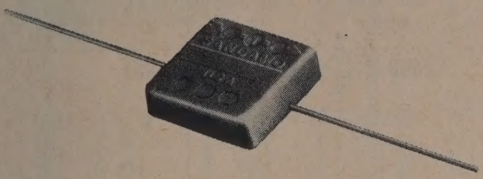
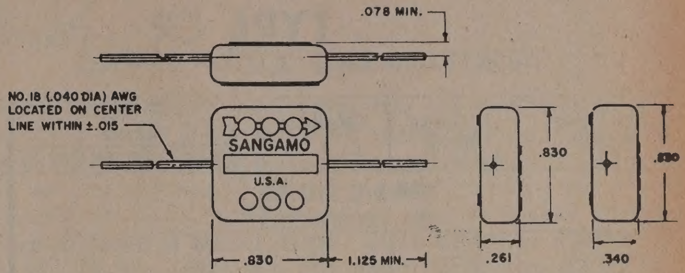
Type C-CR *MICA CAPACITOR*





Type C foil mica capacitors are molded in tan Humiditite in either 10% or 20% tolerance. These units are only supplied as "B" characteristic.

Type CR silvered mica capacitors are molded in red Humiditite. These units are normally supplied as 5% tolerance and "C" characteristic. Units can be supplied to ±1/2 pf or ±1/2% whichever is greater, as well as D, E or F characteristic.

Both Types C and CR are available in two thicknesses. Where the thicker version is required, the letter "K" should follow the type designation (for example CRK5C682-0). For additional engineering information write for Bulletin 2320.

Type D

DIPPED MICA CAPACITORS

Sangamo Type D dipped mica capacitors are available in four case sizes, D-15, D-19, D-30, and D-42, corresponding to the military sizes of Mil-C-5B. These units utilize silvered mica sections encased in several coatings of electrical grade phenolic and epoxy resins. Commercial units in all instances meet or exceed the applicable requirements of Mil-C-5B. All units shown in the listing are rated for 500 d-c volts and a capacitive tolerance of ±5%. Voltage ratings from 100 to 3000 d-c volts and capacitive tolerance to ½% or ½ pf whichever is greatest are also available. For more complete information, write for Sangamo Bulletin 2323.

SANGAMO ELECTRONIC COMPONENTS

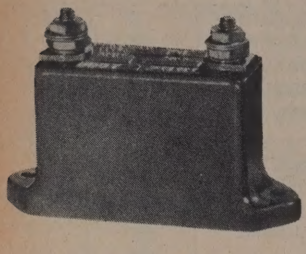
Types F1-F2-F3 *MICA CAPACITORS*



Type F1–F2

Types F1, F2, and F3 capacitors, the smallest of the Sangamo line of transmitting types, possess a range of voltage and current ratings suitable for many applications. They are housed in low loss molded bakelite cases. The mica and foil sections are permanently clamped, vacuum impregnated, and installed in the case in such a manner as to provide stable characteristics and adequate moisture proofing. For additional information write for Sangamo Bulletin 2322.

SANGAMO Type M Silvered Mica Button® Capacitors are designed particularly for application in high frequency circuits. Their high "Q" is indicative of their low loss. These units meet all requirements for V.H.F. and U.H.F. applications and are constructed to be electrically and mechanically stable.

The silver-plated case design performs the dual purpose of shielding and being the low potential terminal. The high potential terminal through the center of the capacitor allows 360 degrees electrical current distribution, resulting in extremely low series inductance and more efficient performance in high frequency applications.

All units are normally furnished in characteristic "E" and in 500 working volts D.C. Case sizes are in accordance with Mil-C-10950B as general types CB11, CB21, CB75 and CB76. The Type MHC are hermetically sealed and will far exceed the environmental requirements of Mil-C-10950B. For more complete engineering information write for Bulletin 2311A.

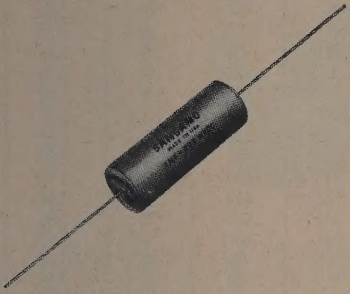
SANGAMO ELECTRONIC COMPONENTS

Type S *Subminiature hermetically sealed metal tubular paper dielectric capacitors*



SANGAMO Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. These units are encased in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished using glass-to-metal, solder seal terminals. The impregnant used in the Type S is Etherm-an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Styles listed below are supplied with the case floating (circuit o—| |—o). To complete catalog and military type nomenclatures insert proper designation to indicate type desired in accordance with the following cross reference table.

SANGAMO TYPE	MILITARY TYPE	Description
SBA	CP04	bare case (tab construction)
SBB	CP05	insulated case (tab construction)
SDA	CP08	bare case (Extended foil)
SDB	CP09	insulated case (Extended foil)

The Type S is also available in many other designs. Case sizes are in accordance with Mil-C-25C specification. For more detailed information write for Bulletin 2421.

ELECTRONIC COMPONENTS

Type 71 PAPER

SANGAMO Type 71 paper dielectric capacitors are impregnated with Diaclor - a specially compounded, chemically pure, chlorinated dielectric oil, SANGAMO Diaclor is a synthetic impregnant whose characteristics can be controlled with great uniformity and possesses a high dielectric constant, high resistivity, low power factor, high dielectric strength and is non-flammable and non-explosive. The Type 71 is an excellent choice in medium and high voltage circuits where light weight per unit volume is an important factor. Each unit is finished with grey lacquer paint over a zinc chromate under coat. All units are built in accordance with applicable paragraphs of Specification Mil-C-25C. - For −55C to +85C operation up to 150 volts in military and industrial electronic equipment.
- Low leakage current and stable temperature coefficient makes possible its use in many circuits where aluminum foil designs are undesirable.
- The electrolyte system used assures long operating and shelf life, excellent low temperature performance, chemical stability and inertness.
- MIL version of Sprague Type 112D.
- Type CL24 is a bare metal-case unit. If an outer insulating sleeve is desired, order Type CL25.
- For quantity prices see your Sprague Industrial Distributor.

SPRAGUE CAPACITORS

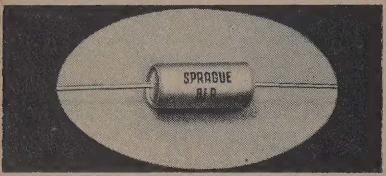
VITAMIN Q® SUBMINIATURE PAPER CAPACITORS



These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Hermetically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements.

Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: −55°C to +85°C and −55°C to +125°C. Because of their Vitamin Q impregnation, these subminiature capacitors have a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts) but recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

SPRAGUE CAPACITORS

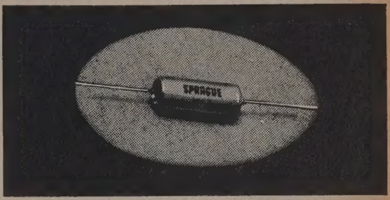
121P METALLIZED PAPER CAPACITORS

- Designed to operate at 125°C WITHOUT VOLTAGE DERATING — extremely important in military and industrial equipment where higher temperatures are encountered.
- Quality of these capacitors is surpassed only by Type 118P units described on opposite page.
- High insulation resistance — at 85°C, minimum product of insulation resistance and capacitance is 20 megohm-microfarads. At 125°C, minimum product is 1.0 megohm-microfarads.
- Hermetically sealed with glass-to-metal solder-seal terminals — capacitor cases are of corrosion resistant materials — similar in appearance to Type 118P.
- May be operated at low voltages, unlike many other metallized capacitors.
- For complete performance data, see latest issue of Engineering Bulletin 2210.
- Capacitors listed below are ungrounded case (insulated section) units without outer insulating sleeves. For information on other styles consult your Sprague Industrial Distributor.
- For quantity prices call your Sprague Industrial Distributor.



- For units with outer plastic insulating sleeve, change last digit in cat. no. from 2 to 4.

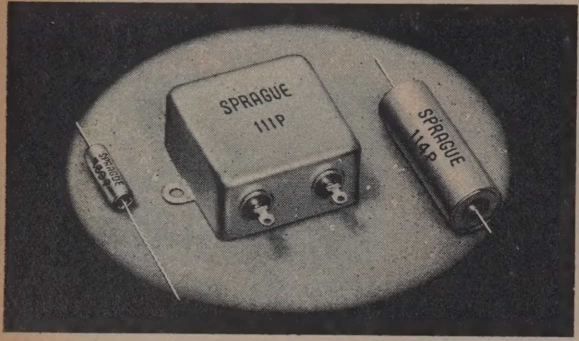
SPRAGUE CAPACITORS



METAL-CLAD FILM CAPACITORS

Polystyrene film dielectric capacitors have the lowest dielectric absorption of all film capacitors. The exceptionally high insulation resistance will generally exceed 10,000,000 megohm-microfarads. They have extremely low power factor, close capacitance tolerance, high capacitance stability with temperature change and high operating temperatures. The unusual properties of these capacitors make them particularly suitable for circuit applications demanding such characteristics. All capacitors listed here are hermetically sealed in metal cases.

114P Styracon® Polystyrene Film Tubulars

Specially processed polystyrene film dielectric ● Operating temperature range, —55°C to +85°C ● High insulation resistance ● Low dielectric absorption (under .05%) ● High capacitance stability (less than ±.2% drift) ● Extremely low power factor (high Q) ● Units listed below have capacitance tolerance of ±5%. For ±20%, change 8th digit in catalog number from 5 to 0; for ±10% change to 9; for ±2% change to 2; for ±1% change to 1 ● Units listed below have plastic insulating sleeves. For plain metal case, change last digit in catalog number from 4 to 2 ● For complete technical data, refer to latest issue of Engineering Bulletin 2510 ● Prices available upon request.

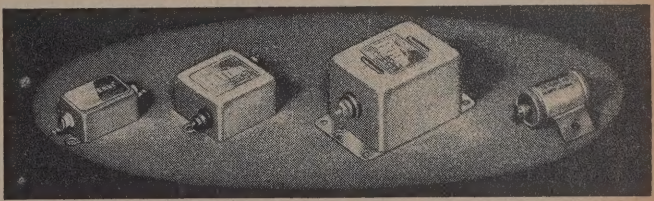
FILTEROL® FILTERS



FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices . . . A 3-terminal network with the case as one terminal . . . The selected filter should have a rating higher than the continuous operating current of the offending device . . . A single Filterol connected to the high side of the line is usually sufficient . . . In severe cases a Filterol in each leg of the power line may be necessary . . . For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating a Sprague HYPASS® Capacitor . . . Provides exceptionally high attenuation at frequencies above 5 megacycles . . . Intended for small devices with continuous current ratings up to 20 amperes.

CRAMOLIN fluid is a combination protection and cleaning preparation. It is preferably applied on contacts already in use, or on apparatus where contact deficiency has occurred and where these contacts should be protected against oxidation. May be used on old and new contacts, and with other CRAMOLIN products.

CRAMOLIN-SPECIAL fluid is not a cleaning preparation, however, it does provide the essential protection needed. It is mainly used in the manufacture of new instruments or apparatus where the improvement of performance is desired as well as to preserve and increase the life of the apparatus. Should be used on new contacts or those contacts that have been previously cleaned with CRAMOLIN.

CRAMOLIN-PASTE is a semi-solid form and is also a combination protection and cleaning preparation. Usually used for high amperage and/or high voltage use. Can be used after applications of CRAMOLIN for good results.

Ask or write for Bulletin C-200 for complete Technical Data.

HERE ARE 14 REASONS WHY CRAMOLIN IS THE MODERN CONCEPT ON IMPROVING CONTACT PERFORMANCE

1. Reduces contact resistances to their minimum values.
2. Reduces sparking of brushes on commutators.
3. Improves performance of contacts and collector rings.
4. Protects against salt air and sulfidic atmosphere and will not absorb moisture.
5. Applied on moving parts, Cramolin will stay on. Cramolin contains a chemical compound which is strongly attracted by metal surfaces and cannot be removed completely, even by high pressure friction.
6. Fungus growth will not develop on Cramolin-films, because Cramolin contains mineral and synthetic ingredients only.
7. Cramolin is not aggressive on baked varnishes, although it may affect some nitro-cellulose lacquers.
8. Max. effective operating temperature range is —34°C to +150°C.
9. Cramolin can be safely used at a relative humidity of 95% and temperatures up to 100°C.
10. Cramolin will perform equally as well under air pressure as well as in a vacuum.
11. Insulation resistance of 10^{13} ohms between contacts at distance of 1 cm on Trolitul (phenol-formaldehyde resin).
12. Tests have indicated that no injurious secondary effects arise.
13. Cramolin may be applied on old contacts without special precautions. All non-metallic layers, dust, resin, etc., will be dissolved and removed at once by rubbing it off, or by operating the contact several times.
14. Under general operating conditions Cramolin should be reapplied after two to three years (on high frequency and low current contacts). In highly corrosive atmosphere (containing acid, sulphide, etc.) reapplication should take place after one year. If the air contains unusual quantities of ammonia, contacts should be treated with Cramolin-Special.

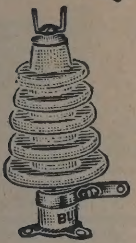
Chokes and Hardware

TRANSMITTING CHOKES

CERAMIC-COATED TYPE



Consists of five graduated pies continuously wound. Pies are not resonant on an amateur band. Distributed capacity kept at a minimum. Each choke is wound on 9/16″ diameter steatite rod, has connection lugs and a mounting foot.
All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing between the individual pies.

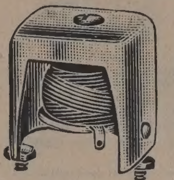
IRON CORE RF CHOKES

SILK-COVERED WIRE TYPE



Improves the efficiency of any circuit requiring an RF choke. Finely divided molded metallic core improves "Q"; results from DC resistance being 40–50% less for a given inductance than regular air-core types. DC voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are silk-covered enamel wire terminated on handy soldering lugs. Chokes mounted in small round shield can, 1⅜″ x 1⅜″ x 1 7/16″.

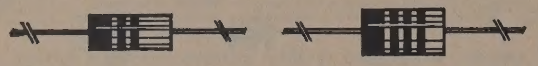
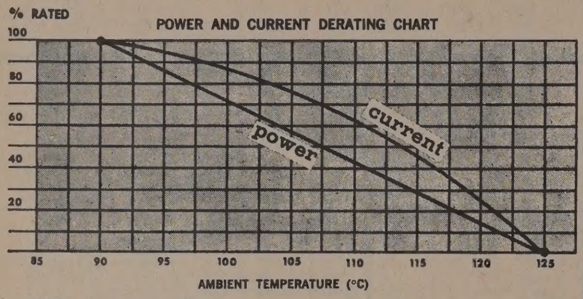
MIL-SPEC MOLDED CHOKES

MILLER MOLDED COILS CONFORM TO MIL-C-15305 C



This group of molded chokes affords the design engineer a wide range of inductance values, current ratings, and sizes which will fulfill most normal design requirements. Manufactured under strict Quality Control supervision and tested in accordance with MIL Standard 105 the user is guaranteed uniformity and reliability in every coil. This series conforms to MIL-C-15305C, Grade and Class 7.



Tabulated currents in milliamperes are maximum values based on a temperature rise not to exceed 35° C., nor wattage dissipation in excess of listed values.

Molded Choke Coils Color Coding

A MIL—identifier shall consist of a wide silver band at one end of the coil, followed by three narrow bands. When the first or second band of the three bands is gold, this represents the decimal point for values less than 10 microhenries, the two bands represent significant figures. For values of 10 microhenries or more, the first two bands represents significant figures, and the third band represents the multiplier. For small units, dots may be used instead of bands. The diameter of the MIL—identifier dot is larger than the other dots. See figure 1.

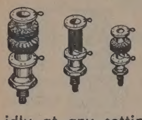
Industrial Adjustable R.F. Coils

Ceramic Adjustable R.F. Coils



The forms used in this series feature terminal rings machined from the ceramic form material. Coils wound on these forms exhibit high Q and good stability. The adjusting core is held rigidly at any setting through the use of a newly designed tension device on the bushing.

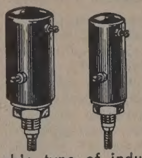
Encapsulated Adjustable R.F. Coils



This series of encapsulated coils offer the maximum possible performance from an adjustable type of inductor. The coil is wound on an epoxy form which is placed inside an epoxy cup and this area filled with epoxy resin. In this manner a complete seal against moisture is achieved and good mechanical stability is assured.

Radio Frequency Chokes

R.F. Chokes with Axial Leads

These chokes cover an inductance range from .1 microhenry to 10 millihenries in 5 decades with 8 coils per decade. Inductance values increase in steps of approximately 50%. Either single layer or 3-pi universal windings are used to insure low distributed capacity. Chokes are wound on low-loss molded phenolic or powdered iron core forms and are impregnated with a moisture- and fungus-resistant varnish. The type of powdered iron used allows the chokes to operate at all frequencies up into the ultra-high frequency region.

Dimensions: Phenolic form 3/16″ diameter x ¾″ long. Iron core form 7/32″ diameter x ⅞″ long. Leads are 1½″ long.

Ceramic Core R.F. Chokes

Miller ceramic core radio frequency chokes are the result of careful research and design, and present advantages found in no other comparable chokes. These chokes have extremely low distributed capacity.

All chokes are impregnated with a moisture- and fungus-resistant varnish.

FIGURE 2

Designed for maximum efficiency and highest impedance at specific operating frequencies this group of R.F. chokes eliminates the designers task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major Amateur, Industrial, and Citizens bands the coils will also operate efficiently at frequencies approximating the recommended frequencies.

The RFC-3.5, RFC-7, and RFC-14 are the standoff type, mounted by a single 6-32 screw. All other coils are mounted with axial leads.

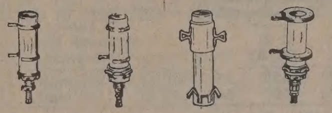
Coil Forms



We have compiled a separate listing of our coil forms that have appeared for years in our catalogs as part of the R.F. Coil listings. Resinite material is a phenolic impregnated tubing that can be certified to Mil-P-79B type PBG. The ceramic material meets Jan I-10, Grade L5 and is Silicone Impregnated to reduce moisture absorption. When ordering forms the type of core should be specified by the addition of a suffix taken from the following:

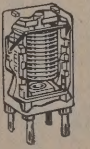
F.M. Stereo Multiplex Inductors



Basically the system involves pick-up of sound by two microphones, the left (L) and right (R). Subsequently the two audio signals are combined in such a way that L plus R frequency modulates an F-M carrier in the conventional way while L minus R amplitude modulates a 38KC stereophonic subcarrier, and the resulting double side-band AM signal (23-53KC) with suppressed carrier, likewise frequency modulates the FM carrier. A 19KC pilot sub-carrier signal also frequency modulates the FM carrier and at the receiver provides a means of controlling the frequency and phase of the 38 KC carrier for re-insertion. When broadcasting Stereo Multiplex the region of 53 to 75KC is allotted to the station for SCA signals.

In the receiver the output of the F-M detector comprises the L+R audio signal, the 19KC pilot sub-carrier, and the 23-53KC A-M modulated (L-R), suppressed carrier signal. It is then required to separate the 23-53KC signal by means of a suitable filter, generate a 38KC signal under the control of the 19KC pilot sub-carrier, re-insert the sub-carrier, and detect the resulting signal. This yields L—R. This must then be combined in a suitable matrix with the L+R signal in such a manner that the L signal appears at one output terminal and the R signal at another.

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear. The front concentric can be used as a coarse tuning (1:1 ratio to the output in the rear) and the small diameter shaft in the front can be used for fine tuning.

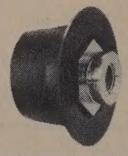
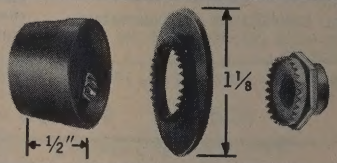
KNOB RATIO DRIVE
(9 to 1)
Cat. No. KRD-11
(plain gripping surface)
Cat. No. KRD-12
(knurled gripping surface)



Exploded view shows engineered miniature gear system, to permit precise, fine tuning of controls. As shown, 9 to 1 ratio. Other ratios designed to specifications.

Brass gears; black anodized aluminum knob and dial. Available with knurled or non-knurled outside knob.



RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JOLTA — Bench Model No. 1001 — Produced to meet JAN-S-44 & Mil-Std. 202 (202A). Standard model range-30-120G. Accessory plate springs available for test pulses to 500 G.

JOLTA — Bench Model No. M-500 — Produced to meet Mil-T-12679A (Sig. C) and Mil. T-19500A. Standard model range —200 to 1000 G at 1.0 millisecs. Alternate anvil and pad kits available to order.

JOLTA—Floor Model Nos. F-3003-C1, C2, C-3—Designed for high impact shock testing for small and moderate-sized components. Precision-machined magnesium casting utilized for higher shock amplitudes. Typical tests with these units 50 to 5000 G at .2 to 11.0 millisecs. For high impact testing, accessory springs and twin anvil combinations yield impulses of 0.2 millisecs to 5000 G.

Note: New design allows for quick changeovers of accessories.

JAN'S MAGNETIC SHIELDS are made of Mu-Metal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See following pages for specifications on JAN'S BEZEL ASSEMBLIES.

With Fixed or Retractable Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch";* automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

**Normally set for 2½ - 5" lbs. Can be modified for other requirements.*

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

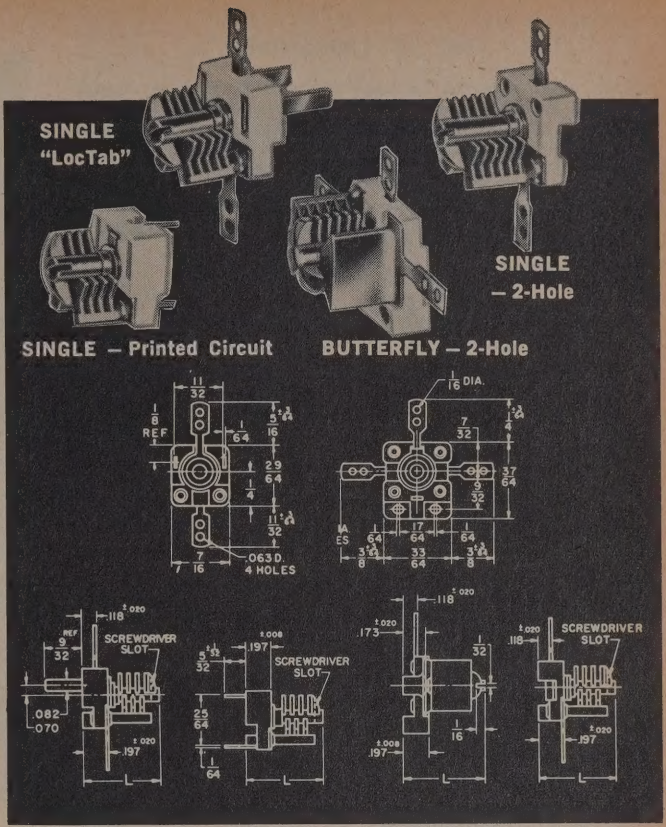
AIR VARIABLE CAPACITORS

Whatever the choice . . . sub-miniature capacitors for printed circuit use—or large, heavy duty types . . . time and again engineers specify Johnson Air Variables!

More than 11 basic capacitor types are readily available in a wide selection of single section, dual section, butterfly and differential models. Units range in size from the diminutive sub-miniature Type "U" capacitors, to large, rugged heavy duty "C" and "D" types. Standard stock capacitors in a wide range of plate spacings, capacity per section, breakdown ratings, and finishes will meet many military and commercial applications . . . specials to your specifications are also available in production quantities.



TYPE "U" AND "UB" CAPACITORS

These tiny Type "U" and "UB" sub-miniature air variable capacitors require less than 0.2 and 0.3 square inch area respectively for chassis or panel mounting. Rotors and stators are precision machined from one piece of solid brass for outstanding mechanical stability and uniformity. Unit offers high "Q" (greater than 1500 at 1 mc), high torque-to-mass ratio, and low temperature coefficient — provides absolute freedom from moisture entrapment found in trimmer capacitors of enclosed or solid dielectric type. All metal parts silver plated — ceramic steatite Grade L-4 or better. Exceptionally uniform delta C and voltage characteristics. Extra heavy end rotor plate protects against accidental damage during handling. No special tools required for installation — slotted end accommodates large screwdriver for quick adjustment. Choice of wide, double pierced or printed circuit style terminals; and "LocTab," printed circuit, or two-hole mounting styles. Specials and Two hole mounting are available only in production quantities.

Note: When ordering "LocTab" add-1 to Cat. No.; Printed Circuit add-5 and 2-hole mounting add-7*

TYPE "M" CAPACITORS

These small Type "M" miniature air variable capacitors are excellent for use in compact equipment. Bridge type stator terminal provides an extremely low inductance path to both stator supports. Soldered plate construction, oversize bearing, and heavily anchored stator supports insure extreme rigidity. Large beryllium copper compression rotor contact provides steady torque — and rotor stays "put" where set. Rotor contact and all other metal parts are nickel plated — steatite insulator is DC-200 treated. Mounting bushing threaded with ¼-32 flats to prevent turning — mounting nut furnished. Peak voltage 1250 volts on .017" spaced units; 850 volts on 160-130 which is spaced .013". 3/16" diameter shaft* slotted for screwdriver adjustment. Available in production quantities with the following features: locking bearings; 180° stop; various shaft extensions; high torque; silver or other platings.

*Instrument type tuning knob to fit 3/16" shaft available.

TUBE SOCKETS—GENERAL SPECIFICATIONS

To simplify selection of sockets and to provide complete specifications for standard, industrial and military requirements, wherever applicable, Johnson tube sockets have been categorized under a socket standardization program. General specifications are listed on the following pages — detailed specifications on the complete socket line are covered in Socket Standardization Booklet 536. Should you desire a copy for Engineering Department use, please make your request on company letterhead.

Standard — Commercial grade for general requirements. Bayonet sockets have porcelain bases, glazed top and sides with .0002 cadmium-plated phosphor bronze contacts. Wafer sockets have glazed steatite bases, DC-200 treated. Contacts are plated brass with steel springs. Shells and shields are etched aluminum.

Industrial — Higher quality than Standard types. Glazed steatite bases, DC-200 treated. Contacts .0005 silver-plated — on Bayonet Sockets are phosphor bronze with beryllium copper springs . . . phosphor bronze or beryllium copper on Wafers. Shells and shields are aluminum, iridite No. 14 treated. (Except 123-206-100.) Fungus resistant cushion washers under contacts.

Military — Top quality for military requirements. Glazed grade L-4 or better steatite bases, DC-200 treated. Phosphor bronze contacts and beryllium copper springs, .001 silver-plated on Wafers — Bayonet sockets have .0005 silver-plated beryllium copper contacts. Aluminum shields on shielded Wafers are iridite treated — bayonet shells are brass .0003 nickel-plated. Threaded hardware .0002 nickel-plated, unthreaded hardware .0003. Hot tin-dipped terminals. Fungus resistant cushion washers. (Glass base melamine on Wafers.) Wafer sockets protected for 200 hour salt spray test.

SOCKETS FOR RCA 8072, 8121, 8122, AND SIMILAR TUBES

For ultra high frequency tubes such as RCA 8072, 8121 and 8122 types. Continuous heat resistance to 500° F. with low-loss glass-filled Silicone base and heat treated beryllium copper contacts. Base material has low dielectric constant which results in low pin-to-pin and shunt capacity. Elevation pads permit excellent base pin cooling. Teflon chimney for increased leakage path and higher voltage breakdown. Socket contacts grip tube pins directly at base of tube – providing minimum inductance. Barriers between terminals for increased leakage path and higher voltage breakdown. Direct cathode ground provided by tabs located at mounting points adjacent to cathode contacts. Large center hole and basic configuration results in low capacity; three point mounting provides stable mounting. With numbered terminals. Low inductance screen by-pass capacitor available for VHF and UHF operation.

CITIZENS' BAND RADIO

THE RCA MARK VIII Type 17704

The RCA Mark VIII Radio-Phone is a 27 megacycle citizens' band 2-Way Radio designed to provide business and industry with a dependable short-range communications facility. Its low cost and uncomplicated operating features also make it ideal for use by sportsmen.

The Mark VIII may be operated for business or personal use. Although no operator's license is required, a station license is necessary and may be obtained through application to the FCC using the form supplied with the unit. This station license is granted only to citizens of the United States 18 years of age or older, but persons other than licensees, including those under 18, may operate units under the supervision of the licensee.

In many respects, the Mark VIII represents a significant departure from ordinary citizens' band radio design. Its low, slim silhouette (only 3½ inches high) facilitates installation in extremely cramped locations permitting under-the-dash mounting even in today's small cars.

One of the most important, and unique features of the new Mark VIII is the inclusion of *only* an ac power supply in the transceiver. A separate dc power supply (optional) is available for either 12-volt dc (Type 17705) or 6-volt dc (Type 17705-A) operation. This small unit may be mounted on the firewall of the vehicle as a permanent installation, and the Mark VIII can be plugged in for mobile use, or unplugged and carried into the home or office for base station operation. In addition to reducing the size of the transceiver, this arrangement results in considerably lower costs for the user who doesn't require a mobile power supply in every unit.

- 9 crystal controlled transmit and receive channels
- Tuneable receiver for reception of all 23 CB channels
- Excellent voice reproduction—high intelligibility
- Built-in ac power supply
- Separate 6 or 12-Volt dc power supply (optional) for mobile installation
- 5 Watt* transmitter—Nominal output 3 Watts or better
- Highly selective superheterodyne receiver with one rf and two if amplifiers
- Fully adjustable squelch circuit to quiet receiver
- Improved Automatic Noise Limiter to reduce effects of ignition and similar interference
- Automatic Volume Control: affords maximum gain of weak signals and limits strong ones
- Unique "message monitor" feature: Calls from nearby stations can be heard even with volume control turned all the way down
- TV1 trap eliminates interference with television sets in area
- P1 network output assures more efficient antenna coupling—insures peak output
- Electronic switching—no relay noise or chatter
- Audio Output—2½ watts
- Impact resistant plastic push-to-talk ceramic microphone with coil cord
- Rugged metal cabinet with plastic face plate—attractive midnight blue and gray scratch resistant vinyl finish

- * Maximum plate input power to final radio frequency stage as defined by FCC Regulations

BANTAM JACK PANELS

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks in a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

BANTAM JACK PANEL SPECIFICATIONS

Panel: Aluminum alloy, extruded. 1¾ inches wide for standard 19 inch rack mounting.

Jack Mounting: Four molded plastic inserts, each provides for 24 jacks. Pairs of jacks on ⁵⁄₈ inch centers. Double row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.

Panel mounting: Mounting brackets are integral part of panel.

Designation Strip: Extruded clear plastic.

Panel Finish: Anodized, Black.

BANTAM JACKS

Bantam Jacks will meet the electrical, mechanical and environmental requirements of the military specification for long frame telephone jacks. Although reduced in size these jacks will provide the same reliable service equal to that expected from regular size telephone jacks. These jacks are available in a variety of two and three conductor types, with isolated circuit contacts as well as normalling contact.

SPECIFICATIONS:

Frame: Steel, Cadmium plate with chromate conversion coating to withstand 50 hours of salt spray.

Springs: Nickel silver.

Contacts: Palladium, cross-bar contacts are welded to springs.

Insulation: Spacers, Phenolic Type PBE-P per Mil-P-3115B.

Bushing: Brass, silver soldered to frame. Finish same as frame.

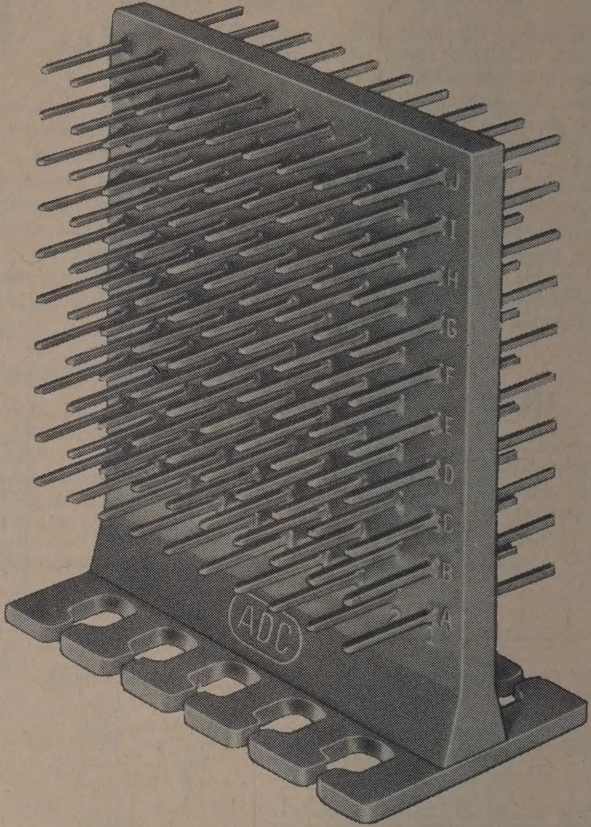
NEW "WRAPID" TERMINAL BLOCKS FOR SOLDERLESS, WRAPPED WIRE CONNECTIONS



Shown here in actual size is one of a new series of ADC terminal blocks. This model gives you a total of 100 solderless connections in a 2½ inch space.

It's only 3⅜ inches high, 2½ inches wide, and comes in one assembled piece that is mounted in seconds. Standard models available for 40, 60, 80 and 100 connections. Other configurations can be custom made in production quantities.

ONE CONNECTION EVERY FIVE SECONDS

These are solderless, wrapped wire connections. In less than 5 seconds the most inexperienced operator can spin-on a wire and make the most positive connection obtainable. He can make 100 connections in less than 8 minutes using any commercially available wrapping tool.

RUGGED, RELIABLE CONNECTIONS

Wrapped, solderless connections are mechanically stable and have less tendency to break due to handling and vibration than soldered connections. You get clean, metal-to-metal gas tight contact between wire and terminal with permanently low electrical resistance.

Both block and fanning strip are molded of durable, high-impact rubber modified acrylic plastic well known for its dimensional stability, strength and resistance to shock under adverse environmental conditions. Terminals are hard brass and plated for maximum conductivity.

Behind the development of these new terminal blocks is 25 years of experience in meeting rigid military specifications on a wide variety of devices. This is your assurance of top quality performance and long dependable service life.

Letters and numbers provide easy terminal identification.

Mounting studs are steel cadmium-chromate plated to withstand 50 hours of salt-spray.

CUT COSTS MANY WAYS

Not only do these new terminal blocks save space and time, they cut production costs.

Wrapped connections depend more on the wrapping tool — less on the operator. The result: the most positive, most uniform connections obtainable — with less need for inspection. The operator makes more connections with far less fatigue.

And, you eliminate expensive solders, connectors, damaging solder splashes, clippings, and deceptive cold-soldered joints.

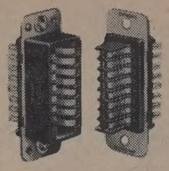
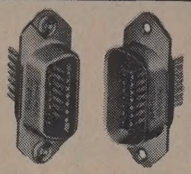
AMPHENOL RACK & PANEL CONNECTORS



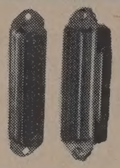
BLUE Ribbon® CONNECTORS

The Amphenol gold-plated ribbon connector provides more contact mating surface than any connector of its type. Applying the principle of the wedge, ribbon contacts exert a continuous flexing action against each other while mated, providing unusually low contact resistance. The Blue Ribbon® contact is self-wiping for reliability throughout its long life, and is available with 8 to 32 contacts. Cable to panel versions are also available.



Micro RIBBON® CONNECTORS

Amphenol's Micro Ribbon® connector is a miniature version of the Blue Ribbon. It features 14 to 50 contacts, low contact resistance, self-wiping action and miniature size.

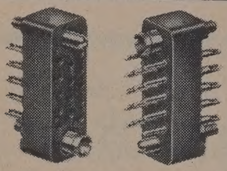


MinRac 17 CONNECTORS

Amphenol's Min-Rac 17® connector is highly suited for saving needed space for proper ventilation, component mounting, or chassis size reduction. Mounting depth is less than most "shell-less" rack-and-panel connectors. It provides up to 50 Poke-Home® terminals in half the insert space required for standard rack-and-panel connectors. Poke-Home contacts are available in either crimp or solder versions.

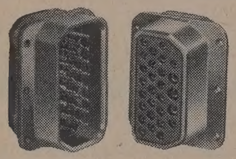
HEX-TYPE CONNECTORS

Amphenol provides a complete family of miniature rack-and-panel and cable-to-chassis connectors for interconnection in a wide range of applications. Hardware and contacts are interchangeable. Bodies are molded of diallylphthalate; gold-over-silver contacts will not tarnish or corrode and can be soldered without pre-tinning even after long storage. All hardware is nickle-plated solid brass.



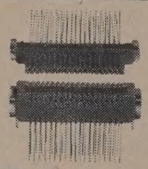
126 SERIES CONNECTORS

The 126 Series is a versatile group of connectors available in 11, 15, and 20 contacts—with or without protective can and cable clamp. Rated at 900 volts RMS, 60 CPS at sea level. Bodies are mica-filled phenolic; contacts are gold-plated.



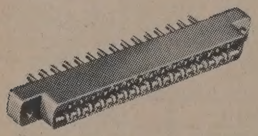
94 SERIES POKE-HOME® CONNECTORS

Amphenol's 94 Series rack-and-panel connectors feature Poke-Home contacts. Aluminum shells are cadmium plate, chromate treated. Useful for any rack-and-panel application, the 94 Series is especially valuable where circuits must be changed frequently within the connector. Poke-Home contacts can be wired and then inserted into the mounted or unmounted connectors in any desired position.



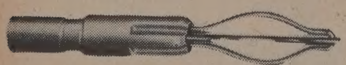
MICRO-MINIATURE CONNECTORS

Amphenol provides three additional complete series of subminiature connectors designed for modules, stick-circuitry, thin style printed circuit boards, and other micro-miniature applications. Use of the Micro-Mod®, Micro-Min® Series, and Micro-Edge® connectors is limited only by the imagination of the design engineer.



PRINTED CIRCUIT CONNECTORS

Amphenol's printed circuit connectors are available with ribbon or tuning fork contacts. The broad selection of contact tails represents the most complete line in the industry.



WIRE-FORM POKE-HOME® CONNECTORS

Unique contact design in Amphenol's Wire-Form connectors places the spring tension member in the pin contact. The Wire-Form connector combines Poke-Home contact versatility with center to center spacing as close as .075. Four complete styles are available:

Mighty-Mite®—cable-to-panel and cable-to-cable application; 7 to 61 contacts.
Tiny Tim®—module and rack-and-panel application; 5 to 33 contacts.
Micro-Rac®—rack-and-panel, cable, and module application; 52 to 104 contacts.
Wire-Form Strip—permits cutting and stacking in unlimited shapes,

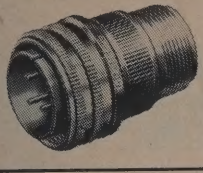
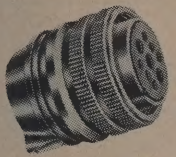
AMPHENOL POWER CONNECTORS



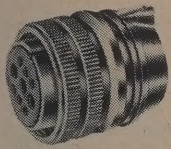
MS CONNECTORS

Amphenol builds MS connectors to the latest issue of MIL-C-5015 Specification. They are designed, manufactured, and approved under this specification for the armed forces, and are ideal for commercial and industrial applications which require the same versatility and dependability.



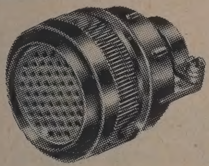
MS—E/R CONNECTORS

Amphenol's resilient dielectric MS connector meets all environmental requirements of the latest revision of MIL-C-5015. Its unitized grommet eliminates the use of bulky cable clamps, and results in a considerable reduction of length and weight in relation to standard MS connectors.



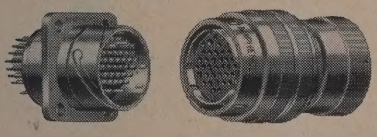
69 POKE-HOME® CONNECTORS

Amphenol Poke "R" solderless connectors provide all the lightweight environmental-resistant features of MIL-C-5015s "R" Class with two important additions: Poke-Home contacts and superior environmental performance. Incorporation of these two features make Poke "R" a highly preferred MIL-C-5015-type connector.



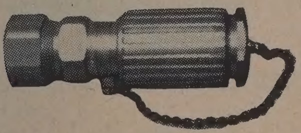
48 SERIES—MIL-C-26500 (USAF)

Meeting or exceeding all MIL-C-26500 requirements, Amphenol's 48 Series combines miniature environmentally-resistant construction and Poke-Home crimp type contacts. MIL-C-26500 connectors perform with utmost reliability in temperatures of −55° C to +260° C, with no de-rating up to 360,000 ft. Available with threaded and bayonet coupling.



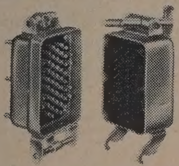
67 SERIES MINNIE® CONNECTORS

Amphenol 67 Series MinniE connectors are quick-disconnect, multi-contact, miniature bayonet types. MinniE connectors feature inclined stainless steel slots and spring loaded coupling rings. A bright orange visual indicator signals full coupling. The 67 Series has a wide variety of shell styles with environmental capability. Receptacles are available in hermetics.



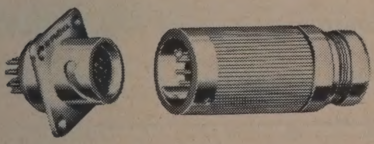
89 SERIES CONNECTORS

Rugged and completely leakproof, Amphenol 89 Series connectors provide efficient and dependable service even when entirely submerged in mud, ice, water, or mire. They are used extensively in missile ground-and-support systems, radar antenna installations, oil well and digging equipment, and other hard-service applications. Available in more than 70 insert configurations with 2 to 52 contacts.



115 SERIES CONNECTORS

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 contacts and are nominally rated at 750 volts RMS, 60 CPS at sea level. They provide maximum space efficiency for all applications where a large number of circuits must be broken quickly and conveniently. The vise-action of the screw lock permits a quick-make quick-break switching action of all contacts.



MINIATURE "AN" CONNECTORS

Compact, efficient Amphenol 165 Series connectors are miniature versions of standard AN/MS types. Because of their weight and space saving design they are widely used in aircraft and miniaturized electronic equipment. 165 Series connectors use bayonet couplings, and are both pressure-proof and completely waterproof—mated or apart. Hermetically sealed, 182 Series connectors mate with connectors of the 165 Series.

172 SERIES HERMETIC CONNECTORS

Amphenol 172 Series hermetic receptacles use an improved hard-glass compression seal with high visibility "Identoseal" contact identification. Both insert faces have ceramic white marking permanently fused to the dark brown glass. Receptacles mate with MIL-C-5015 MS plugs. The 172 Series is available in round flange, square flange, hex flange, and flangeless shells.

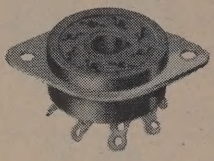
TUBE SOCKETS, AND MICROPHONE CONNECTORS

"S" TYPE TUBE SOCKETS

Amphenol "S" type tube sockets mount quickly and easily without screws or rivets by means of a patented "Retainer Ring Mounting." Sockets position to line up contacts for convenient wiring. The "S" type tube socket may be used with "Plug Caps" to make high-quality, low-cost cable connectors. Available also in mica-filled phenolic.

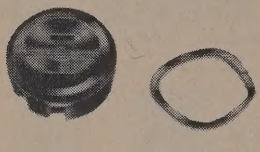


"MIP" SOCKETS

Amphenol's famous "MIP" socket (Molded-in-Plate) features Bakelite dielectric, and 4 to 20 contacts.

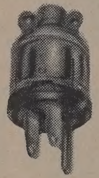
"CP" PLUGS

Amphenol "CP" plugs also mount simply through use of the patented "Retainer Ring Mounting." "CP" plugs are ideal as chassis connectors with plug-in units and are available optionally in mica-filled phenolic. They also adapt to cable applications when used with steel caps.



110/220 VOLT PLUGS & RECEPTACLES

Amphenol's 110/220 volt plugs and receptacles may be panel or cable mounted. Available with rubber grommeted or cable clamp type shields, recessed or raised mountings, two or three contacts.

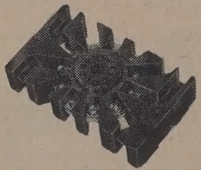


110 VOLT GROUND PLUGS & RECEPTACLES

Amphenol's 110 volt ground plugs and receptacles meet latest UL requirements. The 160 Series may be panel or cable mounted.

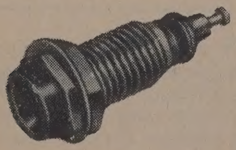
MIKE CONNECTORS

Designed for use with shielded microphone cables, Amphenol's family of microphone connectors are available in several series and include "Quik" Microphone Connectors with quick-button disconnect, 75 Series, single and double contact 80 Series, and its companion, 3 and 4 contact 91 Series.



RELAY SOCKETS

Amphenol relay sockets are available in a broad range of contact styles and sizes, with up to 20 contacts.



MILITARY TIP JACKS

Amphenol military tip jacks feature a recessed silver-plated contact for top durability and high performance. Tip jacks formerly were manufactured by the i.p.c. division.

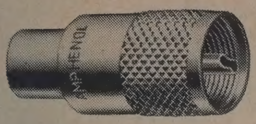
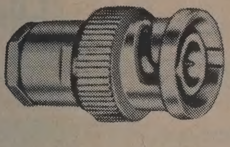
RF PRODUCTS



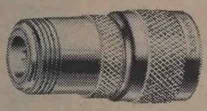
83 SERIES UHF CONNECTORS

Amphenol's UHF 83 Series consists of both small and large single and twin contact connectors. All are low-cost, general purpose connectors of non-constant impedance. They operate satisfactorily at frequencies up to 200 megacycles, can be used with caution up to 500 megacycles, and can be used at peak voltages up to 500 volts.



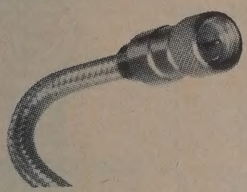
BNC SERIES CONNECTORS

Amphenol Series BNC connectors for small coaxial cables consist of non-constant impedance types and an improved constant 50 ohm impedance type. All incorporate quick-connect and disconnect bayonet-lock coupling and are weatherproof. BNC connectors are small, lightweight, and are recommended for quality, low-voltage applications, both indoors and out.



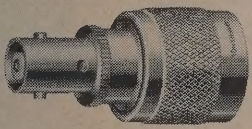
SERIES N CONNECTORS

Completely weatherproof Series N connectors are the most popular constant impedance connectors for medium size coaxial cables. They can be used throughout microwave frequencies with minimum line unbalance or increase in standing-wave ratio. Although Series N 50 ohm and 70 ohm connectors do not mate, 70 ohm cables may be used with 50 ohm Series N connectors where impedance matching is not critical.



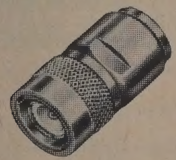
SUB*Minax*® RF CONNECTORS

Amphenol's SubMinax RF connector family provides the most complete subminiature line available from one source. The SubMinax 27 Series is gold-plated and uses a MIL-C-22557 screw-on and push-on coupling. The SubMinax 5116 is silver-plated and mates with competitive non-MIL-C-22557 screw-on, push-on coupling types. The 5116 contains only five components, saving as much as two-thirds assembly time.



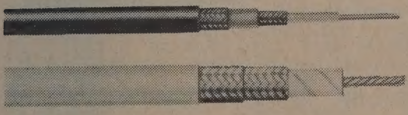
BETWEEN SERIES ADAPTERS

Amphenol can provide the most complete line available of between-series adapters.



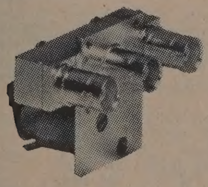
OTHER RF CONNECTORS

Types C, HN, LC, BN, TNC, LN, SKL, MB, MC, SM, TWINAX, MHV, and Terminations, as well as a variety of modifications, make up the complete Amphenol/i.p.c. line.



COAXIAL CABLE

Amphenol provides the broadest line of RG and non-RG coaxial cable available, and is generally accepted as the quality leader in this field. Dielectric includes Teflon, Polyethylene, and Polyfoam.



COAXIAL SWITCHES

Amphenol coaxial switches provide remote and manual switching up through 4000 mc. Single pole, single throw–through 12 pole. Available with a variety of terminating connectors and relay voltages.

"JONES" 140-141-142 SERIES BARRIER TERMINAL BLOCKS

Increased insulation is provided by having barriers placed between each terminal. These barriers follow around the edge of the strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed-wires at terminals. **Size:** 140 Series—Base, ⅞″ w. x 13/32″ h.; term. centers, ⅜″. 141 Series—Base, 1⅛″ w. x ½″ h.; term. centers, 7/16″. 142 Series—Base, 1 5/16″ w. x ⅝″ h.; term. centers, 9/16″.

PRINTED CIRCUIT EDGE CONNECTORS

Designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with .00003″ minimum gold plated. Types 250, 251 and 252 utilize bifurcated contacts, permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Connectors meet requirements of MIL-C-21097A (Ships) where applicable. One plastic polarizing key furnished unassembled. Rating: 830 v. AC rms.

ELCO'S PATENTED SOCKET FEATURE

CONFORMING TO MIL-S-12883-A, our exclusive, patented SOCKET design will be found in all our 7-Pin and 9-Pin Base-Shield and Saddle Type Sockets (except Ceramic). This ingenious design provides a positioning-key at the top of the socket which permits the tube to "find" its correct insertion position without loss of time or pin damage. And by virtue of the E-Z MATE* feature, tube locations may now be designed into "blind" or formerly inaccessible positions.

ELCO Connectors, sold under the trade-mark VARICONS, provide the most positive contact under all operating conditions. Unaffected by vibration, repeated insertions and withdrawals, or lateral and longitudinal stresses. Employ electrical and mechanical characteristics to allow their use in nearly any type of circuit, even in the most restricted areas. Polarity combinations may be varied on individual units with the same number of contacts; prevents accidental mating of dissimilar combinations. Contacts in use are always under pressure; cannot be over-stressed or strained. Both male and female contacts are free floating inside their housings. Contacts are silver-plated and cadmium-plated. Cadmium-plated hardware chromated for use in marine atmospheres. Covers are blue wrinkle finish; available in other colors on special quantity orders. Current Rating: 20 amps, 115 v., 30°C temperature rise, Voltage Rating: 1500 volts at sea level; 750 v. 3.4 in./Hg.; 1300 volts, withstanding at 3.4 in./Hg.; 4000 volts AC, withstanding at sea level. Contact Resistance: .002 ohm. Insulation Resistance: 25,000 megs. min., dry. Prefix M: Indicates male connectors. Prefix F: Indicates female connectors. Prefix R: Indicates ruggedized ends, standard 12 contacts and over.

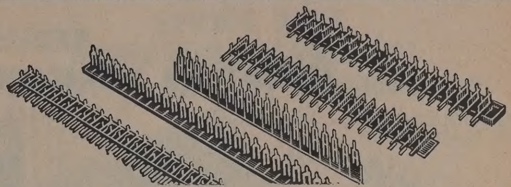
SERIES 5000 CARD-TO-CARD PRINTED CIRCUIT VARICON* CONTACT STRIPS



ELCO Contacts, sold under the trade-mark VARICONS, are supplied on disposable plastic strips at .200" spacing. One to 60 contacts to a strip may be obtained from distributors' stock. All ELCO connector distributors will cut the strip to your exact requirements. Staking of the contacts to the printed circuit card is made in accordance with modern mass-production techniques with special staking tools. Tools are available from ELCO either unmounted, for application to customer die set, or completely mounted in ELCO die set, as desired. Staking of contacts to the printed circuit card, and thereby to the printed circuit line assures a solid, low resistance contact rigidly held in place. Dip soldering the card automatically makes an additional connection between contact and card, thus creating an unsurpassed reliability for the joint. Over 65 pounds are required to tear a contact from the card if staked, and soldered, 50 pounds if staked only and 25 pounds if only soldered. For small-size modules, brackets can be supplied separately. It is recommended that larger modules be guided by integral parts of the equipment. Contacts: Phosphor Bronze. Finish: Gold flash over nickel plate. Contact Resistance: .002 ohm max. Insertion and withdrawal force: 8 oz. per contact, average. Contact Life: Unchanged after 5000 insertions and withdrawals. Request Bulletin 02-5200.

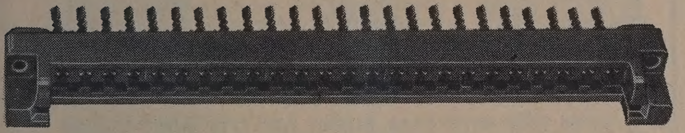
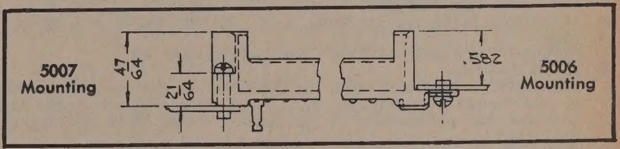
SERIES 5006 & 5007 MINIATURE VARICON* PRINTED CIRCUIT CONNECTORS





SERIES 5006 & 5007 RECEPTACLE

- CONNECTOR BODY is constructed of a one-piece molding.
- GUIDES integrally molded in the end sections of the connector insure perfect mating of the printed circuit module card with the connector.
- MOUNTING is accomplished in two ways:
  Series 5006—End sections have projections for mounting in rectangular cutouts in metal panels as used in ELCO's VARIPAK* card cages. All connectors can be secured simultaneously by a common metal bar screwed to the connector panel.
  Series 5007—End sections with guides and mounting holes similar to Series 7001 for direct mounting to chassis.
- CONTACT CONFIGURATION is a single row of contacts on .200 spacing.
- ELCO CONTACTS, sold under the trade-mark VARICON, are available with terminations for .098" Base Taper Tab w/Wire Hole or Conventional Solder Termination for 3 Wires,
- POLARIZATION is accomplished simply by insertion of a polyethylene polarization insert. No loss of contact positions is incurred. Insert can be supplied loose or inserted in specified position at ELCO.

SERIES 5006 & 5007 PLUG

- SPECIFY CONTACT STRIP 02-???-013-5200
- PRINTED CIRCUIT MODULE CARD is punched or drilled and ELCO contacts staked in and soldered, forming the connector plug.
- HOLE PATTERN for the ELCO printed circuit contacts lies on a .200" grid, and should be held to ±.003" tolerance, non-accumulative, for hole locations. Hole diameter is .052 plus .000, minus .004.
- CONTACT STAKING to the printed circuit module is accomplished by using contacts embedded in a plastic strip (for handling and contact support), and ELCO staking tool T1215-1-1-4-4, or ELCO Staking Press AS-2.
- Request Bulletin 00-5006.

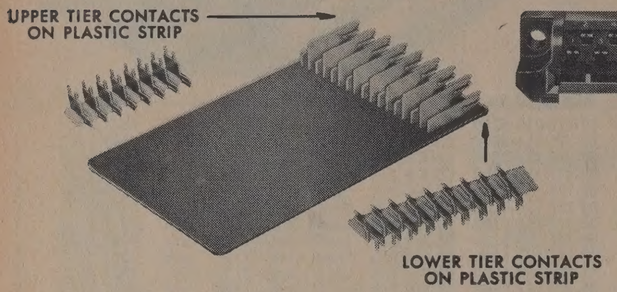
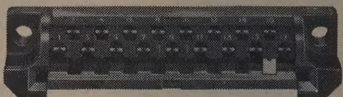
SERIES 7001 AND 7008
MINIATURE VARICON* PRINTED CIRCUIT CONNECTORS



UPPER TIER CONTACTS ON PLASTIC STRIP
LOWER TIER CONTACTS ON PLASTIC STRIP

7001



7008

- CONNECTOR BODY consists of a one-piece molding.
- GUIDES are integrally molded at each end of the connector to insure perfect mating of the printed circuit module card with the connector.
- MOUNTING of connector is accomplished with two .128″ diameter holes, one at each end of the connector. Connector can be mounted above chassis using card guides or below chassis with card guides omitted. When staked to the printed circuitry of a base card, use of the .128″ diameter mounting holes is optional.
- CONTACT CONFIGURATION is a double row of contacts, the center line of one row .125″ from the other. Contacts are on .200″ centers within each row. One row is offset .100″ from the other. The row of contacts nearest the card slot has one contact more than the adjacent row.
- ELCO Contacts, sold under the trade-mark VARICONS, are available for .078″ base taper tab or .098″ base taper tab with wire hole.
- STANDARD SIZES are available in 17, 23, 29, 35, 41 and 47 contacts.
- MODULE CARD SIZE of 1/16″ can be provided for.
- POLARIZATION:
  7001 SERIES—a tubular metal pin 7001.4012 is used for polarization at odd contact numbers; i.e., 3, 5, 7, etc. Use of the first and last positions for polarization is not recommended. Pins are factory assembled.
  7008 SERIES—A polyethylene insert is inserted into the card slot at even contact numbers; i.e., 2, 4, 6, etc. These can be factory assembled, or furnished loose for your own inserting. When ordering separately, specify part number 50-5006.3414 (1/16 card).
- NOTES:
  7001 and 7008 SERIES Connectors differ in two basic respects:
  1. Polarization (See "Polarization" above).
  2. Module card dimensions. The module card of the 7008 is .100″ wider (.050″ on each side) and .050″ longer (added to the connector end of the card).
- PRINTED CIRCUIT LOCATIONS should be held to plus or minus .003″ of true positions. Overall dimensions of a given pattern must not accumulate individual tolerances and should also be held to plus or minus .003″.

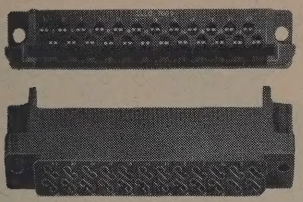
SERIES 7009 VARITWIN-PIN* PRINTED CIRCUIT CONNECTOR



RECEPTACLE

- CONNECTOR BODY is constructed of a one-piece molding.
- GUIDES integrally molded with the connector body insure perfect mating of the printed circuit module card with the connector.
- MOUNTING of the connector is accomplished by two .128'' diameter mounting holes, one at either end of the connector. Width of the connector is .580'' and permits mounting of adjacent connectors on .600'' centers.
- CONTACT CONFIGURATION is two rows of contacts on .200'' spacing, with .125'' between rows. One row is offset .100'' from the other, allowing .100'' spacing of contacts on the module card.
- ELCO Contacts, sold under the trade-mark VARITWIN-PIN, have bifurcated terminations and each will accept two series 53 taper pins. The terminal end of the contact with its dual positions, lies on a 53° angle with respect to the connector axis, and is recessed 95% into the connector body.
- SIZES AVAILABLE are in 24, 34 and 40 contacts.
- MODULE CARD SIZE is 1/16'' in thickness.
- POLARIZATION is accomplished simply by insertion of a polyethylene polarization tab. No loss of contact positions is incurred. This part can be supplied loose, or inserted at ELCO, according to customer's specifications. When ordering separately, specify part number 5006.3414.

PLUG

- PRINTED CIRCUIT MODULE CARD is punched or drilled and ELCO contacts staked and soldered in, forming the plug part of the connector.
- HOLE PATTERN for the ELCO printed circuit contact lies on a .100'' grid, and should be held to ±.003'' tolerance, non-accumulative, for hole locations. Hole diameter is .052, plus .002, minus .004.
- CONTACT STAKING to the printed circuit module is accomplished by using contacts embedded in a plastic strip (for handling and contact support), and ELCO staking tool T1215-1-1-4-4, or ELCO Staking Press AS-1.
- REQUEST BULLETIN 00-7009.

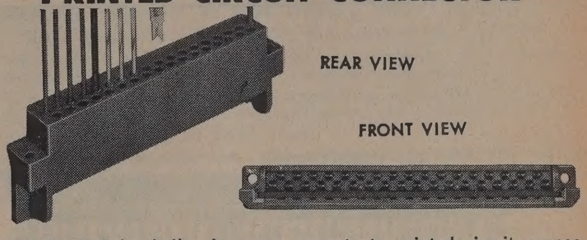
SERIES 7015 MINIATURE VARILOK* PRINTED CIRCUIT CONNECTOR



- SERIES 7015 is similar in many respects to printed circuit connector SERIES 7008. The basic difference is in the contacts used in the receptacles. While SERIES 7008 accepts contacts of many different terminations, SERIES 7015 employs only ELCO crimp-and-insert Contacts, sold under the trade-mark VARILOK, pre-crimped to wires and inserted in the receptacle insulator by the user. Removal of contacts with wires attached is readily accomplished by use of a small hand tool, for the purposes of repair, or reprogramming of the connector wiring. Module cards of both SERIES 7008 and 7015 are completely interchangeable.
- CONNECTOR BODY consists of a one-piece molding.
- GUIDES are integrally molded at each end of the connector to insure perfect mating of the printed circuit module card with the connector, and may be omitted at user's option.
- MOUNTING of connector is accomplished with two .128'' diameter holes, one at each end of the connector. Connector can be mounted above chassis using card guides or below chassis with card guides omitted.
- CONTACT CONFIGURATION is a double row of contacts, the center line of one row .125'' from the other. Contacts are on .200'' centers within each row. One row is offset .100'' from the other. The row of contacts nearest the card slot has one contact more than the adjacent row.
- CONTACTS: The VARILOK* contact is used in these receptacles, and may be furnished loose, or on continuous reels for automatic crimping to the wire leads.
- STANDARD SIZES are available in 17, 23, 29, 35, 41 and 47 contacts.
- MODULE CARD SIZES 1/16'' can be provided for.
- POLARIZATION:
  Type A—A polyethylene insert is placed into the card slot at even contact numbers; i.e., 2, 4, 6, etc. These can be factory assembled, or furnished loose for your own insertion. 5006.3414.
  Type B—A polyethylene insert is used for polarization at odd contact numbers; i.e., 3, 5, 7, etc. Use of the first and last positions for polarization is not recommended. Inserts are factory assembled, or furnished loose for your own inserting. 7012.3214.

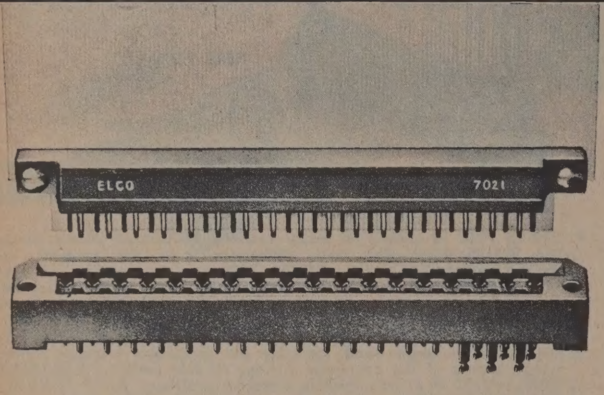
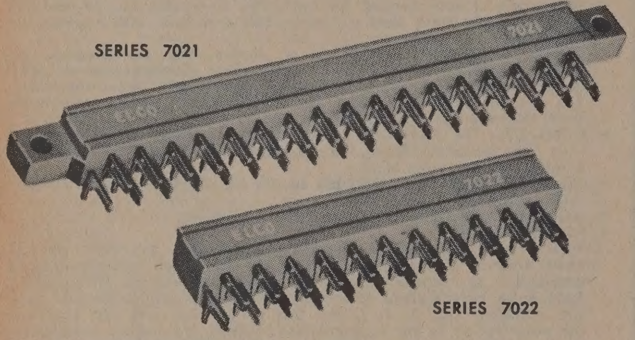
NEW SERIES 7021 AND 7022
ALL-MOLDED, DOUBLE TIER, MINIATURE VARICON* CONNECTOR PLUGS



NEW ELCO SERIES 7021 CARD-EDGE MOUNTED CONNECTOR PLUG SHOWN WITH MATING SERIES 7000 FEMALE RECEPTACLE WITHOUT MOLDED GUIDES.



- New, one-piece molded body provides full protection for lower and upper tier printed circuit module card contacts of the 7000 Series family.
- One fully assembled unit replaces lower and upper card contacts supplied on removable plastic strips. High rigidity of the all-molded body minimizes card warpage at the point of connection for perfect mating with receptacle.
- ELCO Contacts, sold under the trade-mark VARICON, are securely bonded into slots of the insulator, thereby maintaining precise spacing between contacts for perfect mating, resulting in low insertion and withdrawal values, low wear, low contact resistance and long life.
- Lower and upper tier contacts are each equipped with only one leg, instead of double legs, thereby:
  - a. Reducing cost of producing module cards, because only two rows of holes must be drilled or punched instead of four.
  - b. Simplifying the printed circuit layout with the result of larger distance between adjacent printed circuit pads.
  - c. Reducing cost of staking because lower and upper tier contacts can be staked simultaneously instead of each row individually.
- One solid unit with lower and upper tier contacts bonded in position reduces assembly cost. Connector plug can be mounted directly to printed circuit module, and at customer's option staked and soldered in place or merely dip-soldered without staking. Assembly time to remove plastic strip is omitted.
- Plugs are supplied two ways:
  1. *Type 7021* with mounting ears to be used with connectors of the 7000 Series type *without* molded guides.
  2. *Type 7022* for use with 7000 Series connectors *with* molded-on guides.

- CONNECTOR BODY consists of two sections, a plug and a receptacle, each of one-piece molded construction.
- GUIDE PINS AND SOCKETS are factory assembled. One guide pin and one guide socket are mounted in different sized holes in each insulator, thereby permitting mating in only one position. Extra-thick guide pins prevent bending of the pins and damage to the contacts during disconnect.
- MOUNTING is by means of two studs, extending from the guide pin and guide socket respectively, which screw directly into the chassis.

Units Above Right Have ELCO Contacts, Sold Under the Trade-Mark VARICON, for .098″ Base Taper Tab.

- CONTACT CONFIGURATION is 4 rows of 8 contacts each, with spacing between rows of .125″.
- POLARIZATION is by means of a small locating pin which fits into a slot on one side of the guide socket. Six positions are possible for each guide pin and socket, resulting in 36 polarization possibilities. Unless otherwise specified, polarization will be factory inserted in Position 1.
- ACCESSORIES include top or side Cable Clamp, Potting Shell with or without flange, Locking Clips, and Honeycomb Insulator.

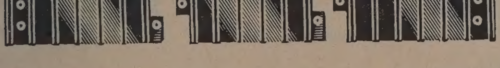
SERIES 9011, 9012 GUIDE STRIPS



Guide strips are ideal time and labor savers designed for use in printed circuit packaging. Reduce engineering and production costs. Printed circuit modules are guided smoothly and accurately when insertion is made into the unit. Guide strips are for 1/16″ boards, at .750″ spacing, and are made of glass filled Diallyl Phthalate. Series 9011 guide strips are assembled as "building blocks." Sectional arrangement allows the designer to include as many strips as the equipment may require, in increments of seven guide locations. Series 9012 guide strips are wider and longer than Series 9011, and can be utilized in a similar fashion. Request Bulletin 03-9011.

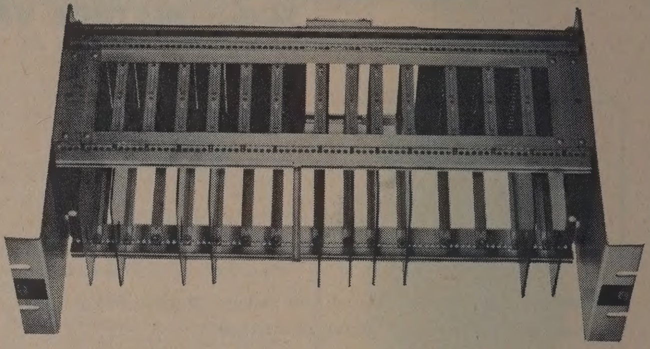
SERIES 9016 VARIPAK* PRINTED CIRCUIT CARD ENCLOSURE



VARIPAK* is our new, improved printed card enclosure, designed to be adapted to any packaging technique utilizing printed or etched circuitry, and to provide maximum density. It holds the printed circuit cards and printed circuit connectors in correct alignment; and its adaptability to any packaging program is universal.

VARIPAK* is made in 4 standard sizes, making it possible to package all 4.500 wide printed circuit cards.

VARIPAK* is made completely of aluminum. Guide Plate is extruded aluminum 6063-T6. Mounting Hanger and Connector Panel are made of No. 14 gauge aluminum 6061-T4. Guides are polycarbonate plastic with a temperature rating of 280°-300°F. A commercially approved clear anodize finish is applied to all aluminum parts.

- VARIPAK* has these additional features:
  1. Simplicity of Card Guide design offers greater strength.
  2. Guides can be easily inserted into Guide Plate and also quickly removed from any position without damage to either the Guide or the Guide Plate.
  3. Card Guides have sufficient float to allow for any tolerance accumulation between the Card Guide and connectors.
  4. Guide Plate fabrication from extruded aluminum provides a much stronger unit.
  5. Connector Panel is assembled with machine screws and nuts rather than self-tapping sheet metal screws.
- CONNECTOR PANEL—Available for two types of connector mounting—panel type and strap type. Strap type ⅛'' thick, ¾'' wide aluminum strap mounted to each Guide Plate. The Connector Panel is a precision blanked part especially designed with "Datum Center Lines" and carefully toleranced holes. The "Datum Center Lines" should be used as base lines from which the connector cutouts are dimensioned. This will insure the best alignment of Guide, printed circuit cards and connectors.
- GUIDE PLATE—Available in various sizes. Has provisions to mount VARIPAK* Guides in 82 different positions on a .200'' grid. Any equal or variable spacing may be selected to suit the space required for components of the printed circuit cards. The greatest density possible is 41 guides on a .400'' spacing.
- VARIPAK* GUIDES—Made of polycarbonate and offer excellent dilectric properties combined with high mechanical strength. Temperature rating is 280°-300°F. Designed to snap in place in any of 82 positions provided in the Guide Plate. Available in three printed circuit card thicknesses—1/16'', 1/32'' and 1/8''. Quickly removable from any position without damage to either Guide or Guide Plate.
- ACCESSORIES—The following are accessory parts supplied on request at additional cost:

  Marker Strip—An extruded flexible white polyvinyl strip provides an area upon which component identification can be imprinted.

  Front Panel—A panel of 14 gauge aluminum 6061-T4 with a commercial or military clear anodize finish. Hinge and mounting hardware can be provided to serve a decorative, protective or functional purpose.

  Brace—With material and finish the same as the front panel, the brace rigidizes the enclosure further assuring its functional operation. One brace is supplied with each standard unit. If requested, additional braces can be furnished at extra cost.
- REQUEST BULLETIN 03-9016.

Units listed on right use 4.50'' wide printed circuit cards. Height of the unit is 5.218'' and is adjustable 1'' either way. The vertical distance between mounting holes is 2¼''. Unit measures 19'' long with standard mounting slots pre-cut.
